

# Department of employment and workforce deploys AD360 to monitor AD changes and admin activities

Company: Department of Employment and Workforce | Industry: Government | Country: US

## Business Needs

The South Carolina Department of Employment and Workforce oversee the registration and collection of the Unemployment Insurance Tax for South Carolina. The State department needed AD audit software to give its security office more control over monitoring AD changes and other domain events.

*AD360 is as easy as it looks and is as easy as it is with accuracy and accountability of information. Now, our security office has more control over the domain while monitoring the admin group activities.*

### Shawn W

Dept of Employment and Workforce,  
South Carolina

## Solution

The department of employment needed a thorough view of their Active Directory events and administrator activities in particular. Admin activities related reports have given their security team a much more efficient process to audit and verify complaints against unauthorized modification of records. This is when South Carolina Department of Employment and Workforce deployed AD360's real-time Active Directory change monitoring and reporting module.

The department of employment now had insights over all the changes happening in their AD, Office365, Windows and Exchange servers. They were able to monitor user logon activities, changes made to AD objects - all in real-time. AD360 also help them comply with various IT compliance regulations such as SOX and HIPAA through out-of-the box reports

According to Shawn W, ADAudit Plus is as easy as it looks!

In addition to using the auditing module of AD360, The department of employment used the integrated self-service password management and single sign-on module of AD360 to help its domain users perform self-service password reset, self-service account unlock and also provides users with secure, one-click access to Office 365, Salesforce, G Suite and other SAML-supported enterprise applications. They were also able to reduce the number of password reset tickets they received, thereby enabling the help desk to work on other critical tasks.

## About AD360

AD360 is an integrated identity and access management (IAM) solution for managing user identities, governing access to resources, enforcing security, and ensuring compliance. From user provisioning, self-service password management, and Active Directory change monitoring, to single sign-on (SSO) for enterprise applications, AD360 helps you perform all your IAM tasks with a simple, easy-to-use interface.

AD360 provides all these functionalities for Windows Active Directory, Exchange Servers, and Office 365. With AD360, you can just choose the modules you need and start addressing IAM challenges across on-premises, cloud, and hybrid environments from within a single console.
