

AD360s makes AD reporting easy for Keolis

Company: Keolis | Industry: Transportation | Country: United States

About the organization

Keolis is a leading shared mobility company that operates public transport networks on behalf of 300 transport authorities around the world. Keolis operates in 16 countries across four continents. Being an expert in multimodality, it partners with public policymakers who want to make mobility an asset for their communities.

The Business Challenge

IT admins at Keolis had to generate numerous reports on various aspects of Active Directory (AD). This was a time-consuming activity as they were relying on PowerShell scripts.

Another challenge they faced was getting complete information about the AD distribution groups and security groups, along with their nested groups.

How AD360 addressed the issue

By implementing AD360's AD management module, admins at Keolis were able to generate AD reports for a wide variety of requirements in a single click. According to Laura Carroll, network specialist at Keolis, AD360 has helped them generate reports "quickly and easily without having to write scripts or even know how to use Powershell."

“

Carroll added that "the software is invaluable for audit reviews.

”

Carroll added that "the software is invaluable for audit reviews."

Carroll also added that with AD360's comprehensive reporting feature, they can "quickly access detailed group members across the domain." This feature has helped Keolis generate comprehensive membership information about specific AD groups as well as all nested members by using recursive queries.

About AD360

AD360 is an integrated identity and access management (IAM) solution for managing user identities, governing access to resources, enforcing security, and ensuring compliance. From user provisioning, self-service password management, and Active Directory change monitoring, to single sign-on (SSO) for enterprise applications, AD360 helps you perform all your IAM tasks with a simple, easy-to-use interface.

AD360 provides all these functionalities for Windows Active Directory, Exchange Servers, and Office 365. With AD360, you can just choose the modules you need and start addressing IAM challenges across on-premises, cloud, and hybrid environments from within a single console.
