

Complete Active Directory Backup and Recovery.

ManageEngine
Recovery Manager Plus

- Back up all AD objects* in a single click.
- Automate backups to run hourly, daily, or weekly.
- Restore deleted AD objects efficiently, with all their attributes intact.
- Roll back AD to a previous state.
- Maintain each change made to an object as a separate backup version.
- Restore individual attributes to a previous value.
- Define a retention period for AD backups.

* Including AD users, groups, OUs, GPOs, computers, Exchange attributes, DNS, contacts, and more.

Insure your AD against any disaster.

The Active Directory challenge

Active Directory (AD) is a crucial part of any organization and any undesirable change could result in unplanned downtime. The change could be anything—objects in AD could be modified or deleted by mistake or as a malicious act, erroneous scripts may overwrite AD attributes, Group Policies may be modified inhibiting work, and that's just the tip of the iceberg. Any change has the potential to impact your organization's productivity significantly, so they need to be handled promptly.

But what if you could reverse any undesired change in just a click?

Introducing RecoveryManager Plus

RecoveryManager Plus is an easy-to-use, web-based AD backup and recovery tool that lets you do just that. It backs up all aspects of your AD environment and lets you restore deleted or modified objects or individual attributes instantly, without having to restart your domain controllers.

“

RecoveryManager Plus is an excellent product. It has given us peace of mind that we can quickly recover should something happen to our AD.

”

Fabio Freire,

Director of infrastructure,
Sandler O'Neill + Partners,
New York

Features that matter:

Scheduled backups

Schedule your AD to back up during non-business hours to ensure regular backups.

Periodic full backups:

Take a full backup of your AD environment at fixed intervals to prevent the chain of incremental backups from becoming too large.

Backup retention

Define the number of full backups to be retained and discard older full backups and all subsequent incremental backups to save storage space.

Multiple backup versions

Back up every change made to an AD object as a separate version and restore values from multiple backup versions for each object.

Attribute-level restoration

Search for particular changes from different backup versions and restore just the modified attribute you need within a few seconds.

Version management and comparison

Compare backup snapshots across multiple versions to get an overview of all previous and current values of AD objects before restoration.

AD rollback

Restore your AD to a previous backup to automatically undo all changes made after that point in time.

AD recycle bin

Restore deleted AD objects and their attributes, including their parent containers, in a single click.

Role delegations

Delegate roles viz., Admin, Operator or Auditor to users and provide them with the rights to perform specific functions in the product.

Reduced costs and increased productivity

Thanks to accurate backups and fast recovery, reduce the time and cost associated with downtime and increase end-user productivity.

Restart-free recovery

Restore AD objects from any backup version without having to restart your domain controllers, ensuring continuous availability.

Highlights

- Web-based, easy to use
- Backup retention
- Attribute-level restoration
- Multiple backup versions
- Support for multiple domains
- AD recycle bin
- Restart-free recovery
- Informative dashboard

Key benefits

- Reduced downtime
- Increased productivity
- Instantaneous restoration
- No scripting

SYSTEM REQUIREMENTS

Processor: 2.13 GHz or higher

RAM: 2 GB.

Disk space: 2 GB.
