RecoveryManager Plus Microsoft Entra ID backup and restoration

- Back up all items in your Microsoft Entra ID environment.
- Store your Entra ID backups within your premises.
- Schedule backups to happen at fixed intervals.
- Perform incremental backups of all items.
- Define the number of full backups to be retained.
- Restore entire objects or individual attributes to any backed-up state.

ManageEngine
RecoveryManager Plus

Highlights

Microsoft Entra ID backup
Back up all Entra ID objects like Users, Groups, Devices, Applications, Service Principals, Directory Roles, Subscribed SKUs, Domains, Policies, and Administrative Units.

Attribute and object-level restoration
Search for particular changes from different backup versions and restore just the modified object or attribute instantly.

Periodic full backups
Make a full backup of your Microsoft Entra ID environment at fixed intervals to prevent the chain of incremental backups from becoming too large.

Incremental backups
Back up only the changes made to your Entra ID since the last backup cycle and store them as separate versions. This will allow you to restore any object to any previous version at a later date.

Restore preview
Preview backed-up items to ensure that the right value will be restored.

Scheduled backups
Schedule your backups to happen during non-business hours to ensure minimal changes to your Entra ID environment when they're being backed-up.

Multiple storage options
Store your backups on-premises in local repositories, NAS, or in the cloud with Azure Blob Storage, Azure Files, AWS S3, Wasabi, and other S3-compatible repositories as needed.

Backup retention
Define the number of full backups to be retained, and discard older full backups and all subsequent incremental backups to save storage space.

Recycle Bin
Restore deleted Entra ID objects and their attributes, including their parent containers, in a single click.

Rollback
Roll back your entire Entra ID, or even individual objects, to a previous backup point and undo all changes made to objects after that point in time.

SIEM integration
Forward Entra ID objects backup and recovery audit logs to a syslog server, enabling centralized monitoring and enhanced security visibility.

Critical security data backup
Securely back up and efficiently retrieve BitLocker recovery keys and local administrator passwords (LAPS) within the Microsoft Entra ID environment.

Benefits

Simple deployment
Install RecoveryManager Plus and start your first Entra ID backup in just a few simple clicks.

Easy-to-use graphical user interface
A simple and clear UI makes working with the product a breeze.

Custom notification profiles
Curate your notification profile, and choose the actions you want to receive notifications for via email.

Role-based delegation with audit report
Assign predefined technician roles such as admin, operator, or auditor to users, or create your own roles based on your needs and provide them with the rights to perform specific functions in the product.
Audit each action performed by technicians.

System requirements

Processor: 3GHz
Number of cores: 6 **RAM:** 16GB

Storage space:
This requirement varies based on the number of backed-up objects and the configured retention period. RecoveryManager Plus typically compresses backups to a third of their original size. If the total size of the Entra ID objects is 1TB, make sure that you have 1TB of free disk space to store the full backup and all subsequent incremental backups.

Supported browsers:
- Mozilla Firefox
- Google Chrome
- Microsoft Edge
- Internet Explorer 10 and above
