

Enterprise backup solution

Active Directory | Microsoft Entra ID | Microsoft 365

Google Workspace | Exchange | Zoho WorkDrive

Active Directory backup

- **Domain controller backup and recovery**

Back up domain controllers and restore them to any previous state.

- **AD objects backup**

Back up and restore all Active Directory (AD) objects, such as users, groups, OUs, GPOs, computers, contacts, and more, in a single click.

- **AD schema backup**

Back up and restore all changes made to classes and attributes in the schema partition.

- **Granular, attribute-level restoration**

Restore individual object attributes to any of their past values instantly.

- **Periodic full backups**

Take a full backup of your AD environment at fixed intervals to prevent the chain of incremental backups from becoming too large.

- **Automatic incremental backups**

Schedule backups to run during non-business hours, capture only the changes made since the last backup cycle, and store them as separate versions.

- **Backup archive**

Define an indexing period for your AD backups and archive them once the indexing period expires. Re-index the backed-up files as and when necessary to facilitate restoration.

- **Multiple storage options**

Store your backups on-premises in local repositories, NAS, or in the cloud with Azure Blob Storage, Azure Files, AWS S3, Wasabi, and other S3-compatible repositories as needed.

- **Backup retention**

Define a retention period for your backups and eliminate older backups to save storage space.

- **AD recycle bin**

Restore deleted AD objects and their attributes, including their parent containers, in a single click.

- **Roll back AD**

Roll back your entire AD environment to a previous backup state to undo all changes made after the backup point.

- **SIEM integration**

Forward AD objects and domain controller backup and recovery audit logs to a syslog server, enabling centralized monitoring and enhanced security visibility.

Microsoft Entra ID backup

- **Microsoft Entra ID backup**

Back up all Microsoft Entra ID objects, like users, groups, devices, applications, service principals, directory roles, subscribed SKUs, and domains.

- **Attribute and object-level restoration**

Search for particular changes from different backup versions and restore just the modified object or attribute instantly.

- **Periodic full backups**

Make a full backup of your Microsoft Entra ID environment at fixed intervals to prevent the chain of incremental backups from becoming too large.

- **Incremental backups**

Back up only the changes made to your Microsoft Entra ID environment since the last backup cycle and store them as separate versions. This will allow you to restore any object to any previous version later.

- **Restore preview**

Preview backed-up items to ensure that the right value is restored.

- **Scheduled backups**

Schedule your backups to happen during non-business hours to ensure minimal disruptions to your Microsoft Entra ID environment.

- **Backup archive**

Define an indexing period for your Microsoft Entra ID backups and archive them once the indexing period expires. Re-index the backed-up files as and when necessary to facilitate restoration.

- **Multiple storage options**

Store your backups on-premises in local repositories, NAS, or in the cloud with Azure Blob Storage, Azure Files, AWS S3, Wasabi, and other S3-compatible repositories as needed.

- **Backup retention**

Define a retention period for your backups and discard older backups once the retention period expires.

- **Recycle bin**

Restore deleted Microsoft Entra ID objects and their attributes, including their group memberships, in a single click.

- **Rollback**

Roll back your entire Microsoft Entra ID environment, or even individual objects, to a previous backup point and undo all changes made to objects after that point.

- **SIEM integration**

Forward Microsoft Entra ID objects backup and recovery audit logs to a syslog server, enabling centralized monitoring and enhanced security visibility.

Exchange Online backup

- **Exchange Online backup**

Back up your entire Exchange Online tenant, including all emails, calendar entries, contacts, journals, notes, posts, and tasks.

- **Item-level restoration**

Restore individual items, such as a single email or calendar event, to any backed-up state.

- **Incremental backups**

Accelerate the backup process by backing up only the changes made since the last backup cycle.

- **Export mailbox data to PST**

Export the contents of an entire mailbox or just specific items to PST format for secure archival.

- **Split PST**

Split an exported PST file into multiple smaller files to overcome the native import limit.

- **Cross-user restoration**

Restore backed-up mailbox items to the same mailbox, a different mailbox, or even a mailbox in a different tenant or organization.

- **Cross-platform restoration**

Restore backed-up mailbox items to the same mailbox, a different mailbox, or even a mailbox in a different tenant or organization.

- **Restore preview**

Preview backed-up items to ensure the right value is restored.

- **Scheduled backups**

Schedule your backups to happen at non-business hours to ensure minimal disruption to users.

- **Multiple storage options**

Store your backups on-premises in local repositories, NAS, or in the cloud with Azure Blob Storage, Azure Files, AWS S3, Wasabi, and other S3-compatible repositories as needed.

- **Immutable backups**

Defend against ransomware by storing backups in immutable cloud repositories like Azure Blob Storage, AWS S3, Wasabi, or other S3-compatible repositories.

- **Retention policy**

Define a custom retention policy to specify how long backups will be held in your repository.

- **SIEM integration**

Forward Exchange Online mailbox backup and recovery audit logs to a syslog server, enabling centralized monitoring and enhanced security visibility.

- **Compression and encryption**

Compress backups to save storage space and encrypt them with AES-256.

SharePoint Online backup

- **SharePoint Online backup**

Back up all SharePoint Online site collections, sites, lists, and document libraries.

- **Item-level restoration**

Restore individual list items or a single document to a backed-up state.

- **Incremental backups**

Accelerate the backup process by backing up only the changes made since the last backup cycle.

- **Complete site restoration**

Restore entire SharePoint Online sites to a backed-up state.

- **Restore to a different SharePoint Online site**

Restore backed-up list items to the same SharePoint Online site or to a different site.

- **Restore preview**

Preview backed-up items to ensure that the right document is restored.

- **Scheduled backups**

Schedule your backups to happen at non-business hours to ensure there's minimal disruption to users.

- **Multiple storage options**

Store your backups on-premises in local repositories, NAS, or in the cloud with Azure Blob Storage, Azure Files, AWS S3, Wasabi, and other S3-compatible repositories as needed.

- **Immutable backups**

Defend against ransomware by storing backups in immutable cloud repositories like Azure Blob Storage, AWS S3, Wasabi, or other S3-compatible repositories.

- **Retention policy**

Define a custom retention policy to specify how long backups will be held in your repository.

- **SIEM integration**

Forward SharePoint Online backup and recovery audit logs to a syslog server, enabling centralized monitoring and enhanced security visibility.

- **Compression and encryption**

Compress backups to save storage space and encrypt them with AES-256.

OneDrive for Business backup

- **OneDrive for Business backup**

Back up and restore all files and folders in your OneDrive for Business environment.

- **Item-level restoration**

Restore individual items like individual files or folders to a backed-up state.

- **Incremental backups**

Accelerate the backup process by backing up only the changes made since the last backup cycle.

- **Complete site restoration**

Restore the entire OneDrive for Business site to a backed-up state.

- **Restore to a different OneDrive for Business site**

Restore backed-up files and folders to the same OneDrive for Business site or to a different site.

- **Restore preview**

Preview backed-up items to ensure that the right file is restored.

- **Scheduled backups**

Schedule your backups to happen at non-business hours to ensure minimal disruptions to your OneDrive for Business site.

- **Multiple storage options**

Store your backups on-premises in local repositories, NAS, or in the cloud with Azure Blob Storage, Azure Files, AWS S3, Wasabi, and other S3-compatible repositories as needed.

- **Immutable backups**

Defend against ransomware by storing backups in immutable cloud repositories like Azure Blob Storage, AWS S3, Wasabi, or other S3-compatible repositories.

- **Retention policy**

Define a custom retention policy to specify how long backups will be held in your repository.

- **SIEM integration**

Forward OneDrive for Business backup and recovery audit logs to a syslog server, enabling centralized monitoring and enhanced security visibility.

- **Compression and encryption**

Compress backups to save storage space and encrypt them with AES-256.

Microsoft Teams backup

- **Microsoft Teams backup**

Back up all channels, posts, and files in Microsoft Teams.

- **Incremental backups**

Accelerate the backup process by backing up only the changes made since the last backup cycle.

- **Scheduled backups**

Schedule your backups to happen at non-business hours to ensure there's minimal disruption to users.

- **Multiple storage options**

Store your backups on-premises in local repositories, NAS, or in the cloud with Azure Blob Storage, Azure Files, AWS S3, Wasabi, and other S3-compatible repositories as needed.

- **Immutable backups**

Defend against ransomware by storing backups in immutable cloud repositories like Azure Blob Storage, AWS S3, Wasabi, or other S3-compatible repositories.

- **Retention policy**

Define a custom retention policy to specify how long backups will be held in your repository.

- **SIEM integration**

Forward Microsoft Teams backup and recovery audit logs to a syslog server, enabling centralized monitoring and enhanced security visibility.

- **Compression and encryption**

Compress backups to save storage space and encrypt them with AES-256.

Google Workspace backup

- **Comprehensive mailbox backup**

Back up all items in your Google mailboxes, including emails, calendar entries, contacts, journals, notes, posts, and tasks.

- **Personal Google account backup**

You can use RecoveryManager Plus to back up not just organizational accounts but also your personal Google account.

- **Item-level restoration**

Restore individual mailbox items, calendar events, or even a single Google Drive file.

- **Incremental backups**

Back up just the changes made to your mailboxes and drives since the last backup cycle.

- **Multiple domain support**

Add multiple Google Workspace domains to RecoveryManager Plus, and back them all up from a single console.

- **Restoration preview**

Preview content, attachments, and documents from Google Workspace backups before restoring them.

- **Schedule backups**

Schedule your backups to happen during non-business hours to minimize the load on your network.

- **Multiple backup storage options**

Store your backups on-premises in local repositories, NAS, or in the cloud with Azure Blob Storage, Azure Files, AWS S3, Wasabi, and other S3-compatible repositories as needed.

- **Immutable backups**

Defend against ransomware by storing backups in immutable cloud repositories like Azure Blob Storage, AWS S3, Wasabi, or other S3-compatible repositories.

- **Backup retention**

Define a retention period for your Google Workspace backups, and automatically discard older backups.

- **SIEM integration**

Forward Google Workspace backup and recovery audit logs to a syslog server, enabling centralized monitoring and enhanced security visibility.

- **Compression and encryption**

Compress backups to save storage space and encrypt them with AES-256.

On-premises Exchange

- **On-premises Exchange backup**

Back up all mailbox items in your on-premises Exchange organization, including emails, calendar entries, contacts, journals, notes, posts, and tasks.

- **Item-level restoration**

Restore individual mailbox items, such as a single email or calendar event, to any backed-up state.

- **Incremental backups**

Accelerate the backup process by backing up only the changes that occurred since the last backup cycle.

- **Export mailbox data to PST**

Export the contents of an entire mailbox or just specific items to PST format for secure archival.

- **Split PST**

Split an exported PST file into multiple smaller files to overcome the import limit.

- **Cross-platform restoration**

Restore a backup of an on-premises mailbox to a mailbox in your Exchange Online tenant and vice versa.

- **Cross-user restoration**

Restore backed-up mailbox items to the same mailbox, to a different mailbox, or even to a mailbox in a different tenant or organization.

- **Restore preview**

Preview backed-up items to make sure that the right value is restored.

- **Scheduled backups**

Schedule your backups to happen during non-business hours to ensure minimal disruptions to your mailboxes.

- **Multiple storage options:**

Store your backups on-premises in local repositories, NAS, or in the cloud with Azure Blob Storage, Azure Files, AWS S3, Wasabi, and other S3-compatible repositories as needed.

- **Immutable backups**

Defend against ransomware by storing backups in immutable cloud repositories like Azure Blob Storage, AWS S3, Wasabi, or other S3-compatible repositories.

- **Retention policy**

Define a custom retention policy to specify how long backups will be held in your repository.

- **SIEM integration**

Forward on-premises Exchange mailbox backup and recovery audit logs to a syslog server, enabling centralized monitoring and enhanced security visibility.

- **Compression and encryption**

Compress backups to save storage space and encrypt them with AES-256.

Zoho WorkDrive backup

- **Comprehensive Zoho WorkDrive backups**

Back up the Team Folder data in your Zoho WorkDrive environment, including all folders, subfolders, and files.

- **Personal folder backups**

Back up all the files and folders of your Zoho WorkDrive users.

- **Item-level restoration**

Restore even a single file from WorkDrive backups to any of its backed-up versions.

- **Incremental backups**

Back up just the changes made to the data since the last backup cycle. This helps you save space and improve backup performance.

- **Support for multiple teams**

Add multiple Zoho WorkDrive teams to RecoveryManager Plus and back up all the data from a single console.

- **Restoration preview**

Preview content, attachments, and documents from Zoho WorkDrive backups.

- **Schedule backups**

Schedule your backups to happen during non-business hours to minimize the load on your network.

- **Download files and folders**

Download any particular version of files and folders whenever needed.

- **Multiple backup storage options**

Store your backups on-premises in local repositories, NAS, or in the cloud with Azure Blob Storage, Azure Files, AWS S3, Wasabi, and other S3-compatible repositories as needed.

- **Immutable backups**

Defend against ransomware by storing backups in immutable cloud repositories like Azure Blob Storage, AWS S3, Wasabi, or other S3-compatible repositories.

- **Backup retention**

Define a retention period for your Zoho WorkDrive backups and automatically discard older backups.

- **SIEM integration**

Forward Zoho WorkDrive backup and recovery audit logs to a syslog server, enabling centralized monitoring and enhanced security visibility.

- **Compression and encryption**

Compress backups to save storage space and encrypt them with AES-256.

Benefits

- **Simple deployment**
Start RecoveryManager Plus in just a few simple clicks.
- **Easy-to-use graphical user interface**
Our simple and clear UI makes working with the product a breeze.
- **Restart-free recovery**
Restore AD objects, Microsoft Entra ID objects, Exchange mailbox items, and Microsoft 365 items from any backup without having to restart your domain controllers or taking users offline, ensuring continuous availability.
- **Custom notification**
Curate your notification profile, and choose the actions you want to receive notifications for via email.
- **Role delegation and technician auditing**
Delegate roles to users—such as admin, operator, or auditor—and provide them with the rights to perform specific functions in the product and audit each action they perform.

System requirements

Processor: 3GHz

Number of cores: 6

RAM: 16GB

Supported Windows OS versions

Windows Server 2025

Windows Server 2022

Windows Server 2019

Windows Server 2016

Windows Server 2012 R2

Windows Server 2012

Windows 10

Windows 8.1

Windows 8

Windows 7

Disk space

AD backup:

This requirement varies based on the number of AD objects, the size of your domain controller, and the retention period set for your backups. RecoveryManager Plus typically compresses backups to a third of their original size. It has a best case compression ratio of 2:1 for domain controller backups.

Microsoft Entra ID backup:

This requirement varies based on the number of backed-up Microsoft Entra ID objects and the retention period configured for your backups.

Microsoft 365 backup:

This requirement varies based on the number of backed-up Exchange Online mailboxes, the size of your SharePoint Online, OneDrive for Business, and Microsoft Teams sites, and the retention period that you set for your backups. RecoveryManager Plus typically compresses backups to a third of their original size.

If the total size of the mailboxes, SharePoint Online, OneDrive for Business, and Microsoft Teams sites is 1TB, make sure that you have 1TB or greater of free disk space to store the full backup and all subsequent incremental backups.

Google Workspace backup:

This requirement varies based on the size of your mailbox and drive. RecoveryManager Plus has a best case compression ratio of 3:1. If the total size of the mailboxes and your drives is 1TB, make sure that you have 1TB or greater of free disk space to store the full backup and all subsequent incremental backups.

On-premises Exchange:

This requirement varies based on the number of backed-up mailboxes and the configured retention period.

If the total size of the mailboxes that are being backed-up is 10GB, make sure that you have 10GB or greater of free disk space to store the full backup and all subsequent incremental backups.

Zoho WorkDrive backup:

This requirement varies based on the size of your Team Folders or personal WorkDrive folders. RecoveryManager Plus has a best-case compression ratio of 3:1. If the total size of the folders is 1TB, make sure that you have 1TB of free disk space to store the full backup and all subsequent incremental backups.
