ManageEngine

Simplifying IT Management Requirements

In this fast-paced, technology-centric environment, adopting and managing new network technologies within an existing IT infrastructure is both important and challenging for global corporations. With the advent of Internet of Things, it has become more complex and challenging to address these requirements.

ManageEngine simplifies these IT requirements with its affordable software solutions, which are easy to use and capable of meeting ever rising enterprise demands. IT administrators must often scale up the capacity of their IT infrastructure to keep pace with increasing business requirements. ManageEngine offers powerful solution to address the most common challenges for Cisco environment like:

- Monitoring the availability and performance of network devices
- Troubleshooting bandwidth issues in real time
- Performing security analysis of network anomalies
- Managing the configuration changes of growing networks
- Gaining complete control over Cisco router and switch technologies

ManageEngine offers real-time network management solutions for next-gen Cisco technologies. With the backup of various Cisco network devices, ManageEngine delivers robust and automated solution for better network management. It protects against security threats from unexpected sources and identifies unauthorized traffic flows within the network.

ManageEngine supports a wide range of Cisco devices and technologies such as NetFlow, NBAR, CBQoS, and IP SLA. Capacity planning reports help organizations to optimally plan and utilize network bandwidth and adapt to new

Raj, President

ManageEngine offers real-time network management solutions for next-gen Cisco technologies

requirements. Having access to SDKs and simulators for all Cisco technology innovations helps ManageEngine to understand the technologies better and build great management software for its customers.

ManageEngine has a great team of engineers who are technically skilled to address the various network-related issue and problems. In addition to their technical skills, the company's engineers are Cisco certified in various technologies. This makes them stand apart from the crowd when it comes to delivering powerful network management solutions. This advanced and up-to-date know-how in the domain and products helps ManageEngine to understand and quickly address customer issues.

ManageEngine's powerful solutions have helped millions of admins worldwide to save over 30 percent in IT management costs and to solve issues 10 times faster than the usual workflow. The following solutions reflect the expertise ManageEngine possesses in the network management domain:

- **OpManager** monitors performance metrics and addresses performance degradation issues with Cisco devices.
- **NetFlow Analyzer** monitors bandwidth consumption and analyzes network traffic in detail with the help of Flow technologies.
- **Network Configuration Manager** monitors configuration changes, ensures compliance, and performs and records audits.
- **Firewall Analyzer** analyzes logs from devices and provides reports to optimize security policies.

Partnering with an industry leader such as Cisco has enabled ManageEngine to quickly adapt to the changing requirements in the network management domain. The company is able to bring up free tools and solutions for optimal management in almost every IT domain. ManageEngine is constantly upgrading their software suite to match the advancements in Cisco's technology.

As business these days are moving to the cloud, it has become vital for organizations to invest in better solutions to manage their IT infrastructure. Cisco plays a major role in evolving the technology space for better network management, and its commitment towards making huge investments in the Internet of Things is a big plus for ManageEngine. A highly efficient network enables smoother transition towards digital transformation and provides threat-detering, network security applications for better and safer network management. *CS*
