Cloud SIEM for managed
security service providers

Manage multiple client environments and offer SIEM as a Service using Log360 Cloud MSSP

Log360 Cloud MSSP delivers cloud-based SIEM capabilities and liberates MSSPs from the complexities of SIEM configuration and maintenance for each client.Equipped with a suite of comprehensive security monitoring features, this cloud SIEM solution was built to cut down on resource and operation costs for MSSPs and to reduce the time it takes to deploy the solution for their clientele. Explore the benefits of Log360 Cloud MSSP:

● Dashboards for multiclient management and collaborative work

The MSSP edition of Log360 Cloud offers a separate SIEM dashboard for each client account and a common admin dashboard. You can monitor the logging trends and usage stats of clients, such as the monthly log data upload volume, the number of lightweight agents installed, the storage summary, and the log sources and types. Admins can add, edit, and delete clients while also having the access and authorization controls to assign technicians to handle the client networks. This ensures a secure space for collaborative work.

● Ease of SIEM configuration and scaling

With Log360 Cloud MSSP, you can configure SIEM for your clients in just two steps:

1. Creating a cloud account

2. Installing agents in their environments

The automated network scanning feature discovers all the network entities, collects logs, and transfers them to the data center. The SIEM dashboard then gets populated and is ready to use within a few days.

Choose from a wide range of flexible plans and scale up or down based on your log storage needs, the number of clients you have, and the add-ons you select. Here are the options available for MSSPs:

A maximum of 50 clients per MSSP account

Over 30 storage plans ranging from 100GB to 20TB

A 360-day log retention period with options to customize logs and forward them to a private cloud account

An advanced threat analytics add-on that integrates global threat feeds to look out for new and evolving attack patterns and blocklisted sources

Guaranteed support and connectivity

Log360 Cloud MSSP offers the following benefits and guaranteed support to help MSSPs monitor their client networks in real time and keep their security operations up and running:

An assurance of 99% monthly uptime (the downtime caused by maintenance and updates will be conveyed to all of our customers two days prior to the event)	The convenience of choosing a data center based on your location	Provisions to track performance metrics through the admin dashboard	Around-the-clock email and telephone support to troubleshoot critical issues related to performance

Transparent security and privacy policies

Log360 Cloud MSSP addresses various security concerns pertaining to delivering SIEM as a Service through rigid security and privacy policies that are kept transparent, publicly available, and compliant with mandates such as the GDPR, ISO, HIPAA, and SOC. We ensure data separation through multi-tenancy as well as security for data in transit and at rest through strong encryption algorithms and role-based access controls.

The cutting-edge SIEM features you'll be using to secure your client networks with Log360 Cloud MSSP

Security analytics dashboard with hundreds of reports for monitoring critical network events and anomalies

Compliance dashboard with reports for top industry-based and location-based regulations like FISMA, Cyber Essentials, the GDPR, the PCI DSS, HIPAA, SOX, the CCPA, the CPRA, CoCo, and FERPA

Real-time alerting with 100 predefined alert profiles per client

Event correlation with predefined rules and options to customize and create new rules

CASB support to monitor cloud application usage and traffic
