SOX Compliance

Automate and simplify SOX compliance using DataSecurity Plus

Automate and simplify SOX compliance using DataSecurity Plus

Enacted in response to multiple corporate accounting scandals, the Sarbanes Oxley Act (SOX) (also known as the Public Company Accounting Reform and Investor Protection Act) safeguards investors from fraudulent activities involving internal employees. Heavy penalties and stringent regulatory standards are imposed to ensure all the financial information processed by an organization is genuine and reliable.

Become SOX compliant using DataSecurity Plus

DataSecurity Plus is an audit tool that delivers the visibility required to monitor and track the validity of all financial information in an organization. DataSecurity Plus' various reports can help you manage the difficult task of proving compliance while ensuring the security of your financial data.

Below is a list of reports you can use to prove that your organization is SOX compliant.

SOX standards	DataSecurity Plus report or alert
Track all modifications to files in order to assess risks to data integrity and resolve violations, if any.	All file/folder changes report
	Deleted/overwritten files report
	Security permission changes report
	Most modified file report
	Create events report
	Renamed/moved events report
	Files modified after N days report
Periodically review all attempts to access critical data, including both successful and failed attempts.	All failed attempts report
	Read events report
	Most accessed file report
	Most accesses by processes/user report
	Files accessed after N days report
Review access rights and file permissions periodically to ensure that no excessive permissions are assigned beyond what is needed.	NTFS permissions report
	Share permissions report
Utilize customizable alerts to enable timely detection of any user actions that violate your data protection policies.	File/folder moved or renamed alert
	File/folder security changes alert
	File/folder removed alert
	Media files alert
Use preconfigured alerts to detect and respond quickly to potential data breaches.	Ransomware file alert
	Threshold-based alert

* You can also generate customized reports based on file path, users, business hours, etc.

DataSecurity Plus

ManageEngine DataSecurity Plus is a unified data visibility and security platform. It audits file changes in real time, triggers instant responses to critical events, shuts down ransomware intrusions, and helps organizations comply with numerous IT regulations. It analyzes file storage and security permissions, deletes junk files, and detects security vulnerabilities. Users can assess the risks associated with sensitive data storage by locating and classifying files containing personally identifiable information (PII), payment card information (PCI), and electronic protected health information (ePHI). It also prevents data leaks via USBs, email, printers, and web applications; monitors file integrity; and audits cloud application usage. Together, these capabilities ensure the all-round protection of data at rest, data in use, and data in motion.

To explore these features and see DataSecurity Plus in action, check out the online demo.

Explore **DataSecurity Plus' capabilities**

File server auditing
Audit and report on file accesses and modifications, with real-time alerts and automated responses for critical file activities.

Learn more

File analysis
Analyze file security and storage, manage junk files, optimize disk space usage, and identify permission vulnerabilities.

Learn more

Data risk assessment
Discover and classify files containing sensitive data such as PII, PCI, and ePHI by combining content inspection and contextual analysis.

Learn more

Data leak prevention
Detect and disrupt data leaks via USBs, email, web applications, and printers; monitor endpoint file activity; and more.

Learn more

Cloud protection
Track enterprise web traffic and enforce policies to block the use of inappropriate, risky, or malicious web applications.
