Endpoint Central MSP

Endpoint Central MSP: For your clients' advanced endpoint management needs

Transform your MSP business with an innovative endpoint management tool designed to simplify your operations.

Available On-premise and On-cloud

Fulfill SLAs better with comprehensive endpoint management

Streamline your clients' endpoint management and prioritize meeting your SLAs effortlessly. Choose an endpoint management tool that supports diverse environments and a wide range of devices.

Presenting Endpoint Central MSP: Your key to MSP excellence

Effortlessly manage diverse client endpoints—including desktops, mobile devices, servers, and POS systems—through a single interface with Endpoint Central MSP. The lightweight agent operates on any OS, enabling simple onboarding and complex operation management on endpoints. Benefit from extensive documentation, dedicated support, and a vibrant community forum for learning and collaboration.

Benefits

| Streamlined endpoint management | Enhanced security | Automation and efficiency | Scalability and growth | Cost savings |

Key Features

Onboard and manage multi-OS endpoints

Simplify your endpoint management process by using a single dashboard for managing macOS, Linux, Windows, tvOS, ChromeOS, Android, and iOS devices. Say goodbye to tedious tab switching! Automate routine tasks for increased productivity, allowing your technicians to spend more time providing top-notch support for your clients.

BYOD policy? No problem

Simplify endpoint management and maintain compliance by managing both corporate devices and BYODs from a single console. Containerize corporate data to separate it from personal data on mobile devices and ensure security. Enroll endpoints with ease—whether in bulk, over the air, or with just a tap—to optimize their management.

Detect, test, deploy, and decline patches

Maximize the success of patch deployment to client endpoints by first testing the patches for any potential bugs in a dedicated environment. Streamline the process with automated routine deployment and the option to reject any unnecessary patches.

Troubleshoot remotely with ease

Eliminate the need for third-party remote access tools by directly using the advanced remote control tools within Endpoint Central's console. After receiving a client's consent, connect to their endpoint to troubleshoot and resolve issues.

Manage assets better

Effortlessly monitor the real-time updates of your clients' asset changes and automatically apply policies to newly detected endpoints. Detect any jailbroken endpoints and easily erase corporate data from them or factory reset them through your console as needed.

Integrate with help desk software

Unify your endpoint management experience by integrating Endpoint Central MSP with ServiceDesk Plus MSP. After the integration, end users can directly raise help desk requests as tickets sent to your technicians through a mini self-service portal, enabling faster resolution.

> **Endpoint Central MSP (formerly known as Desktop Central MSP) is a very stable product and works well for MSPs. For a service provider using this solution, onboarding and setting up client networks and endpoints becomes very easy** "
