GAIN VISIBILITY AND CONTROL OVER SSL, SSH ENVIRONMENTS

www.keymanagerplus.com
SSL Certificate Management

SSL/TLS certificate discovery
Discover all SSL/TLS certificates deployed in your network and add them to a secure, centralized repository.

Certificate request workflow
Generate CSRs instantly; request and acquire public CA certificates through a hassle-free certificate request workflow.

Centralized deployment
Centralize the deployment of newly acquired certificates to their respective end-servers.

SSL vulnerability scan
Identify and remediate vulnerable SSL configurations and weak ciphers, and replace any revoked certificates.

Active Directory integration
Readily integrate, import, and manage certificates mapped to user accounts in Active Directory.

SHA-1 certificate flagging
Identify and replace certificates that use the obsolete SHA-1 hashing function.

Expiration alerts
Eliminate service downtime by receiving customizable, recurring notifications on certificates that are about to expire.
Request
Raise certificate requests using our built-in CSR generation tool.

Forward
Forward the request to a certificate signing authority for domain verification.

Validate
Automate domain control validation and certificate acquisition; import the acquired certificate into Key Manager Plus.

Deploy
Deploy the certificate to its corresponding end-servers from Key Manager Plus.

Out-of-the-box integrations with leading certificate authorities

- Let’s Encrypt
- GoDaddy
- The SSL Store™
- Microsoft Certificate Authority
SSH Key Management

**SSH key discovery**
Discover all SSH keys in your network and add them to a secure, centralized repository.

**Key creation and deployment**
Create new SSH key pairs; associate them with users in bulk and deploy them to target systems.

**Periodic key rotation**
Create scheduled tasks to rotate SSH keys automatically at periodic time intervals and avoid privilege misuse.

**Key-user mappings**
Get a holistic view of key to user relationships across your organization through distinct mapping of individual keys with their respective user accounts.

**Remote SSH connections**
Launch one-click SSH connections to remote systems.

**Disaster recovery**
Schedule backups of your entire database at periodic intervals for disaster recovery purposes.

**Auditing and reports**
Establish a tamper-proof auditing mechanism and get instant access to comprehensive reports on all user activities.
Key Manager Plus serves as an all-around solution for handling digital identities. It enables us to stay on top of SSL certificates for all of our websites. With Key Manager Plus, we’re able to monitor which certificates are nearing expiration and roll out new certificates in a timely manner.

Ken Odibe
Senior cloud infrastructure consultant,
Sapphire Systems.

Experts’ take on Key Manager Plus

The Hacker News
“We were quite impressed by [how Key Manager Plus] simplifies even complex processes of key management, where most organizations fail, leaving themselves vulnerable to cyberattacks.”

TechTarget
“A web-based tool that can help to consolidate, control, manage, monitor, and audit the entire life cycle of SSH keys and SSL certificates is ManageEngine Key Manager Plus.”

FinancesOnline
“[Key Manager Plus] serves as an all-around solution for handling digital identities.”
Key Manager Plus facilitates end-to-end life cycle management of public CA certificates through integration with world’s leading certificate authorities.
