

Log360 Enables Guthrie Medical Group to Easily Audit Changes to its IT Infrastructure

About the Organization

Guthrie Medical Group is a nonprofit healthcare organization offering a full spectrum of health services ranging from primary care, behavioral health services, and surgical services, to pain management and hospice care. Guthrie has five hospitals, numerous specialty centers, and primary sites throughout New York and Pennsylvania. It provides healthcare services to more than a million patients every year.

The organization has a sizable IT infrastructure which includes a robust electronic healthcare system that enables physicians and clinicians to gain a comprehensive view of patients' health and provide appropriate medical attention. Over a hundred technicians work to maintain and safeguard the organization's IT infrastructure.

Log360 is an all-in-one SIEM solution that provides exceptional bang for your buck.

Jake Reynolds,

Information security analyst.

Challenges

Being a healthcare provider, Guthrie handles patients' critical information. To satisfy HIPAA and other compliance regulations, Guthrie must audit its network for all actions performed by various stakeholders. Guthrie's previous security information and event management (SIEM) program processed the organization's data and generated numerical reports only once a week, which made it difficult to comprehend the data or use it for real-time threat detection.

The Solution

Deploying ManageEngine Log360 has helped Guthrie's IT administrators protect their organization in several ways:

- Maintains and enhances the security posture of Guthrie's network by providing a comprehensive picture of critical events, such as account lockouts and password changes. IT admins can also view and respond to incidents based on user profiles.
- Identifies anomalous activities, analyzes, and spots the origin of trouble easily utilizing Elasticsearch, an open source, language-independent search engine.
- Audits every change that occurs within the organization's environment thoroughly and continuously, and satisfies compliance requirements.
- Provides detailed information through over 500 out-of-the-box reports about every aspect of Guthrie's IT environment. It also offers a custom report builder to retrieve any information that is required from the network.
- Simplifies identity management by automating user account management processes such as creation, deletion, and delegation.

Impact

Guthrie values the return on investment it has earned from Log360. For Guthrie, Log360 provides a comprehensive picture of the organization's network infrastructure, and users report they enjoy using the product because of its easy-to-use interface. Guthrie is extremely satisfied with the assistance it has received from the ManageEngine Log360 technical support team to resolve minor issues surrounding the deployment in the company's environment.

ManageEngine

ManageEngine is the enterprise IT management division of Zoho Corporation, catering to a wide range of organizations, MSPs and MSSPs. Established and emerging enterprises—including 9 of every 10 Fortune 100 organizations—rely on ManageEngine's real-time IT management tools to ensure optimal performance of their IT infrastructure, including networks, servers, applications, endpoints and more. ManageEngine has offices worldwide, including in the United States, the United Arab Emirates, the Netherlands, India, Colombia, Mexico, Brazil, Singapore, Japan, China, Australia and the United Kingdom as well as 200+ global partners to help organizations tightly align their business and IT.

About Log360

Log360 is a unified SIEM solution with integrated DLP and CASB capabilities that detects, prioritizes, investigates and responds to security threats. Vigil IQ, the solution's TDIR module, combines threat intelligence, ML-based anomaly detection and rule-based attack detection techniques to detect sophisticated attacks, and it offers an incident management console for effectively remediating detected threats. Log360 provides holistic security visibility across on-premises, cloud and hybrid networks with its intuitive and advanced security analytics and monitoring capabilities.
