

CSA-Ready Aviation IT with ManageEngine

Achieve ANAC's CSA expectations with unified visibility, access control, and actionable monitoring without complexity.

Who Should Prepare for CSA

Airlines and airports

Air navigation service providers

Ground operators and critical aviation IT systems

How to Prepare for ANAC CSA with ManageEngine

ManageEngine AD360 & Log360 provide a unified platform to implement, monitor, and continuously improve CSA-aligned controls.

Capabilities Supporting CSA Implementation

Unified IT & OT Visibility

Monitor all critical aviation systems, from servers to cloud and operational technology, in one central dashboard.

Automated Access Enforcement

Enforce role-based access, privileged account policies, and MFA to meet CSA audit expectations.

CSA-Ready Logging & Reporting

Collect, correlate, and retain logs; generate actionable reports aligned with ANAC CSA principles.

Real-Time Threat Detection

Identify anomalies, high-risk actions, and potential incidents across IT and OT systems instantly.

Audit Evidence Simplified

Maintain tamper-proof logs and evidence for CSA assessment, internal reviews, and continuous maturity tracking.

Operational Resilience

Detect risks early, prevent disruptions, and strengthen system continuity for aviation-critical operations.

CSA Principle Mapping

Principle ID	Principle	How ManageEngine Supports It	Product
A1	Governance	Policy enforcement, audit-ready reporting, structured evidence collection	AD360, Log360
B2	Identity and Access Control	Role-based access, MFA, privileged account monitoring, access reviews	AD360
B3	Data Security	File auditing, sensitive data access monitoring, anomaly detection	Log360
C1	Security Monitoring	Centralized logging, real-time alerts, tamper-proof log storage	Log360
C2	Proactive Security Event Detection	Behavioral analytics, anomaly detection, threat correlation	Log360

CSA Controls Covered

User and privileged account management

MFA and conditional access enforcement

File and data activity monitoring

Centralized logging and anomaly detection

Incident detection and reporting
