ManageEngine to Showcase Latest Versions of IT Security Solutions at Gartner Security & Risk Management Summit

Enterprise IT Security Solutions Specifically Designed to Complement IT Operations, Network and Desktop Management

Business Wire
A Berkshire Hathaway Company

ManageEngine

NATIONAL HARBOR, Md. & PLEASANTON, Calif., Jun 07, 2012 (BUSINESS WIRE) -- ManageEngine, the real-time IT management company, today announced that it will showcase the latest versions of its IT security and compliance management solutions at Gartner Security & Risk Management Summit in National Harbor, MD, between June 11–14. A silver sponsor of the summit, ManageEngine will be demonstrating how its security solutions complement IT operations, network and desktop management, while helping enterprises gain real-time visibility, bolster internal controls, stay secure, ensure business continuity and enhance productivity.

With cyber-security threats growing at unprecedented rates, enterprises are looking for reliable solutions to secure, control and manage their IT ecosystems. "There are numerous point-products in the market focusing on specific segments of IT security. However, what organizations require today is an effective IT security strategy to combat the evolving threats. The security solutions should appeal to IT operations and network teams as much as to security teams," said Rajesh Ganesan, director of product management at ManageEngine.

With a market-leading suite of products in the network monitoring, IT operations and infrastructure management arena, ManageEngine perfectly complements network management and IT operations through its IT security solutions, which cover the entire gamut of network security.

ManageEngine Highlights at Gartner Security & Risk Management Summit

At the Gartner Security and Risk Management Summit (booth #90), ManageEngine will exhibit its IT security solutions covering: Security Information and Event Management, Active Directory Management and Audits, Privileged Password Management, Desktop and Mobile Devices Management, Vulnerability Management and Remediation, and Network Devices Security Management. The solutions being demonstrated include:

Security Information and Event Management

Firewall Analyzer is a web-based tool for change management, configuration analysis, security audit of firewall devices, bandwidth monitoring and security reporting. It collects, archives and reports on firewall logs and provides real-time alerts to detect intrusions, anomaly behavior, audit traffic and monitor employee Internet usage. The latest version automates management, monitoring and reporting for popular virtual firewalls.

EventLog Analyzer is an agent-less log analytics and compliance reporting software solution. Organizations can centrally collect, archive, analyze and generate reports based on machine-generated logs obtained from heterogeneous systems, network devices and applications. It provides out-of-the-box reports for SOX, HIPAA, GLBA and PCI compliance.

Active Directory Management and Audits

ManageEngine offers a set of products for comprehensive Active Directory Management, including ADManager Plus, ADSelfService Plus and ADAudit Plus. ADManager Plus automates routine AD management and reporting activities like bulk management of user accounts and other AD objects. It generates an exhaustive list of AD reports, some of which are an essential requirement to satisfy compliance audits. ADSelfService Plus is a secure, web-based, end-user password reset management program. ADAudit Plus is enterprise-wide Active Directory change auditing software with reports and alerts that address the most-needed security, audit and compliance demands set forth by regulatory and government bodies.

Privileged Password Management

Password Manager Pro is a secure vault for storing and managing shared sensitive information, such as passwords, documents and digital identities of enterprises. It solves the problem of shared administrative passwords and hard-coded passwords. The benefits of deploying Password Manager Pro include eliminating password fatigue and security lapses; improving IT productivity many times by automating frequent password changes required in critical systems; providing preventive and detective security controls through approval workflows and real-time alerts on account access; and meeting security audits and regulatory compliance, such as SOX, HIPAA and PCI. The latest version enables end users to launch secure, browser-based Windows RDP, SSH and Telnet sessions with a single click.

Desktop and Mobile Devices Management

Desktop Central is a complete desktop management software solution that provides software deployment, patch management, service pack installation, asset management, remote control, configurations, system tools, user logon reports and Active Directory reports. It is a network-neutral solution for both enterprises and managed service providers (MSPs) that can be used to manage desktops in Active Directory, Workgroups or other directory services-based networks like Novell(R) eDirectory. The latest version of Desktop Central expands device management support beyond the traditional desktop to include Apple iOS-based devices.

Vulnerability Management and Remediation

Security Manager Plus is a network security scanner that proactively reports on network vulnerabilities and helps to remediate them and ensure compliance. With vulnerability scanning, open ports detection, patch management, Windows file/folder/registry change management, and vulnerability reporting capabilities, Security Manager Plus protects the network from security threats and malicious attacks.

Network Devices Security Management

DeviceExpert is a web--based, multi-vendor network change and configuration management (NCCM) solution for switches, routers, firewalls and other network devices. DeviceExpert helps automate and take total control of the entire lifecycle of device configuration management. It helps prevent unauthorized configuration changes to network devices and to ensure that configurations comply with standards and regulations. The latest version of DeviceExpert provides device end-of-life (EOL) management reporting capabilities, an industry-first feature that helps network managers and administrators keep their network infrastructure up to date.
