News Feed Item ManageEngine Supports Multiple Business Units With Private Social Network

BY BUSINESS WIRE ARTICLE RATING: ☆☆☆☆ NOVEMBER 19, 2012 09:15 AM EST READS: 424

ManageEngine, the real-time IT management company, today announced the support for multiple domains in ITPulse, the industry's first private social network built exclusively for IT teams.

When IT organizations span multiple business units, the resulting fragmentation and isolation can interfere with knowledge and skills transfer as each IT team focuses on its own business unit.

ITPulse originally restricted sign-ups to just one domain as a security consideration," said Dev Anand, director of product management at ManageEngine.

Apart from adding the IT team at various business units, ITPulse now enables the local IT team to also add IT consultants, vendors and service providers.

By integrating ITPulse with IT management tools from ManageEngine as well as from BMC, CA, HP, IBM and other vendors, IT teams can achieve powerful automations that streamline IT collaboration in problem prevention and resolution.

Pricing and Availability ITPulse with multiple domains support is available immediately. In addition to ITPulse Free Edition, which supports up to two users, ITPulse Professional Edition is \$5 per user per month.

Users can sign up for ITPulse at http://youritpulse.com/signup. User licenses are available via the ITPulse store at http://itpulse.myshopify.com/products/it-pulse-user-license and via direct sales at sales@youritpulse.com.
