Office 365, Google Apps, Box, Dropbox, Other Online Service Accounts

- Password strength analyser and enforcer ensures maximum security
- Non-synchronised password reset enables changes to individual passwords
- Download ADSelfService Plus Free Edition or Evaluation Edition at <http://ow.ly/ky8tj>

Interop Las Vegas 2013

LAS VEGAS & LONDON--(BUSINESS WIRE)--ManageEngine, the real-time IT management company, today announced support for cloud applications and storage services in its self-service password software, [ADSelfService Plus](#). Now, whenever users change their Active Directory passwords via ADSelfService Plus, those passwords are automatically synchronised with the users' accounts for cloud-based services, including Office 365, Azure, Google Apps, Oracle E-Business, Salesforce apps, Box and Dropbox.

ManageEngine is demonstrating ADSelfService Plus, and exhibiting the rest of its portfolio, in booth 1367 at [Interop 2013](#), at Mandalay Bay in Las Vegas. The company is also demonstrating major upgrades that were just announced for [Applications Manager](#), the on-premise application monitoring solution; [OpManager](#), the data centre and network monitoring software; and [Site24x7](#), the cloud infrastructure monitoring service.

"Our users are finding that passwords to cloud services are just as difficult to remember as passwords to traditional applications when there's no single sign-on solution in place, and the help desk pays the price in a deluge of password reset requests," said Manikandan Thangaraj, director of product development, ManageEngine. "In response, we've extended ADSelfService Plus to work with a variety of cloud-based services, including some of the most popular business apps and storage services on the market. Users now effectively have single sign-on access to the online and on-premises systems they need to get their jobs done and keep their companies running smoothly."

"Our users are finding that passwords to cloud services are just as difficult to remember as passwords to traditional applications when there's no single sign-on solution in place, and the help desk pays the price in a deluge of password reset requests"

Self-Service for Cloud Passwords

ADSelfService Plus now lets IT administrators synchronize passwords between Active Directory and several cloud-based apps and storage services without the hassles of implementing single sign-on methodology. In turn, end users gain a password self-service system that synchronises their various passwords, sparing them the burden of remembering multiple passwords for multiple IT systems, both behind the firewall and in the cloud. Likewise, administrators are free to increase password complexity for secure on-premise and cloud-based service access. Other highlights of the latest version of ADSelfService Plus include:

- **Password strength analyser and enforcer** – Administrators can deploy customised password complexity rules that must be satisfied to create valid passwords.
- **Non-synchronised password reset** – End users can reset their passwords for cloud-based apps and storage services individually, in a non-synchronised fashion, using their Windows user IDs.
- **Mobile user support** – Users working from mobile devices can synchronise application passwords while on the go as well as reset their Windows passwords while out of network.
- **Mail group subscriber** – End users can subscribe to and opt out of email groups that administrators make available to them — without any intervention from the help desk.
- **Enhanced notifications** – In addition to email, the notification system can deliver alerts to end users via text.

Pricing and Availability

ADSelfService Plus 5 (Beta) is available immediately. In addition to a fully functional, 30-day evaluation edition, ADSelfService Plus is available as a Free Edition, Standard Edition and Professional Edition. Standard Edition prices start at \$595 per year for 500 users. Professional Edition prices start at \$995 per year for 500 users.

About ADSelfService Plus

ADSelfService Plus is a turnkey IT self-service solution which can be easily implemented by administrators and quickly adopted by end users. It offers password self-service, self-service directory updater, password expiry notifier and a people search. It helps the IT help desk by reducing their chief source of burden — the password reset tickets — and spares the end users from frustration due to computer downtime. For more information, please visit <http://www.manageengine.com/products/self-service-password/>.

About ManageEngine

ManageEngine delivers the real-time IT management tools that empower an IT team to meet an organisation's need for real-time services and support. Worldwide, more than 72,000 established and emerging enterprises — including more than 60 percent of the Fortune 500 — rely on ManageEngine products to ensure the optimal performance of their critical IT infrastructure, including networks, servers, applications, desktops and more. ManageEngine is a division of Zoho Corp. with offices worldwide, including the United States, India, Japan and China. For more information, please visit <http://www.manageengine.com/>; follow the company blog at <http://blogs.manageengine.com/>, on Facebook at <http://www.facebook.com/ManageEngine> and on Twitter at [@ManageEngine](#).
