ManageEngine to showcase key enhancements to IT security solutions at e-Crime Congress Dubai 2013

United Arab Emirates: Tuesday, April 30 - 2013 at 16:38   PRESS RELEASE

ManageEngine, the real-time IT management company, announced that it will showcase the latest versions of its IT security and compliance management solutions at e-Crime Congress, Al Murooj Rotana Hotel, Dubai, UAE on May 1, 2013.

This plugin is vulnerable and should be updated. Check for updates... Click here to activate the Adobe Flash plugin.

A Networking Sponsor of the event, ManageEngine will be demonstrating how its security solutions complement IT operations, network and desktop management, while helping enterprises gain real-time visibility, bolster internal controls, stay secure, ensure business continuity and enhance productivity.

"With cyber-security threats growing at unprecedented rates, IT Security Software solutions are the center of interest in the Middle East. Enterprises in the Gulf region are looking for reliable solutions to secure, control and manage their IT ecosystems. There are numerous point-products in the market focusing on specific segments of IT security. However, what organizations require today is an effective IT security strategy to combat the evolving threats. The security solutions should appeal to the IT operation and network teams as much as to the security teams," says Nirmal Manoharan, Senior Business Development Manager at ManageEngine.

"Part of a series of events globally, e-Crime Dubai is designed to meet the needs of key stakeholders and decision makers who are responsible for managing information and technology risk, protecting sensitive data, securing technology and ensuring compliance with multiple regulatory requirements. It is a perfect platform for ManageEngine to reach out to the organizations looking to reduce risk while ensuring operational flexibility and keeping costs low."

With a market-leading suite of products in network monitoring, IT operations and infrastructure management, ManageEngine perfectly complements network management and IT operations through its IT security solutions, which cover the entire gamut of network security.

ManageEngine Highlights at e-Crime Dubai

ManageEngine will exhibit its IT security solutions covering: Security Information and Event Management, Firewall Log & Event Log Analytics, Privileged Password Management, Network Security Management, Vulnerability Management & Remediation, Enterprise IT Compliance Management. The solutions being demonstrated include:

EventLog Analyzer is an agent-less log analytics and compliance reporting software solution. Organizations can centrally collect, archive, analyze and generate reports based on machine-generated logs obtained from heterogeneous systems, network devices and applications. It provides out-of-the-box reports for SOX, HIPAA, GLBA and PCI compliance. The latest version of EventLog Analyzer (v8.5) offers file integrity monitoring, which lets organizations monitor their critical folders and files in real time to prevent sensitive data from being compromised and to fulfill regulatory compliance requirements.

Firewall Analyzer is a web-based tool for change management, configuration analysis, security audit of firewall devices, bandwidth monitoring and security reporting. It collects, archives and reports on firewall logs and provides real-time alerts to detect intrusions, anomaly behavior, audit traffic and monitor employee Internet usage. The latest version automates management, monitoring and reporting for popular virtual firewalls.

Password Manager Pro is a secure vault for storing and managing shared sensitive information, such as passwords, documents and digital identities of enterprises. It solves the problem of shared administrative passwords and hard-coded passwords. The benefits of deploying Password Manager Pro include eliminating password fatigue and security lapses; improving IT productivity many times by automating frequent password changes required in critical systems; providing preventive and detective security controls through approval workflows and real-time alerts on password access; and meeting security audits and regulatory compliance. It also enables end users to launch secure, browser-based Windows RDP, SSH and Telnet sessions with a single click and record the sessions too. Password Manager Pro is now available as a separate edition (beta) for Managed Service Providers, which enables MSPs to securely manage the privileged passwords of their customers' IT assets from a single console, yet achieve complete segregation.

Security Manager Plus is a network security scanner that proactively reports on network vulnerabilities and helps to remediate them and ensure compliance. With vulnerability scanning, open ports detection, patch management, Windows file/folder/registry change management, and vulnerability reporting capabilities, Security Manager Plus protects the network from security threats and malicious attacks.

DeviceExpert is a web-based, multi-vendor network change and configuration management (NCCM) solution for switches, routers, firewalls and other network devices. DeviceExpert helps automate and take total control of the entire lifecycle of device configuration management. It helps prevent unauthorized configuration changes to network devices and to ensure that configurations comply with standards and regulations. The latest version of DeviceExpert provides device end-of-life (EOL) management reporting capabilities, an industry-first feature that helps network managers and administrators keep their network infrastructure up to date. The latest version (v5.9) of DeviceExpert integrates with Password Manager Pro, which streamlines the management of device credentials and configurations. With Password Manager Pro serving as the repository, enterprise IT security policies are enforced and credentials are kept up to date. That means network administrators using DeviceExpert don't need to worry about the integrity of the credentials and gain improved device security, access controls and management of network assets.
