

PasswordManager Pro www.passwordmanagerpro.com

Password Management for Shared and Service Accounts

PasswordManager Pro (PMP) is a web-based Password Management Solution for enterprises to control the access to shared administrative/privileged passwords of any 'enterprise resource' such as servers, databases, network devices, applications etc. PMP enables IT managers to enforce standard password management practices such as maintaining a central repository of all passwords, usage of strong passwords, frequent changing of sensitive passwords and controlling user access to shared passwords across the enterprise.

Features

- Secure, centralized repository of passwords
- Active Directory/LDAP Integration
- Password ownership & sharing
- Role-based access control & user groups
- Real-time notifications on password events
- Automated, remote password changing
- Password policies & compliance reporting
- Comprehensive audit of all user access to passwords
- Setting password expiry
- Tools for backup & disaster recovery

PatchQuest

www.patchquest.com

Patch Management Software

PatchQuest is an automated patch management software for distributing and managing patches, security hotfixes and updates across heterogeneous networks comprising Windows and Linux systems, in just a few simple clicks. It efficiently scans your enterprise network, identifies missing patches and software updates, distributes patches to vulnerable systems and keeps your systems up-to-date and free from vulnerabilities, thus paving way for a more secure enterprise environment. PatchQuest's optional agent architecture gives you the flexibility to manage systems effectively.

Features

- Flexible modes of operation - agent-based, agentless or both
- Multi-OS vulnerability scanning and patching
- Web-based administration console for universal secure-access to data views and configurations
- Cross-platform product installation
- Intelligent patch assessment and validation
- Simplified patch & service pack deployment
- Automated, policy-based update management
- Gamut of reports to facilitate quick access to the data you need

FacilitiesDesk

www.facilitiesdesk.com

Integrated Facilities Management Software

FacilitiesDesk is a web-based Facilities Management system with an Integrated Space Management, Maintenance management and resource management capabilities. It brings together Request Management, Employee and Resource tracking, Purchasing, Contract Management, Self-service portal and a Knowledge base all neatly wrapped in a single package. This facility management tool offers real-time data sharing between all the maintenance & facilities' activities, reducing Your facilities cost run.

Features

- Property and Space Management
- Keep Track of Building lease with timely notification
- Integrated Help-desk
- Resources Tracking and Ownership
- Track number of vacant seats in a location
- Manage your maintenance team
- Plan multiple Employees and Resources Movement through a single request
- Resource Contracts
- PO with approvals

ManageEngine™

**The Smarter
 Alternative**

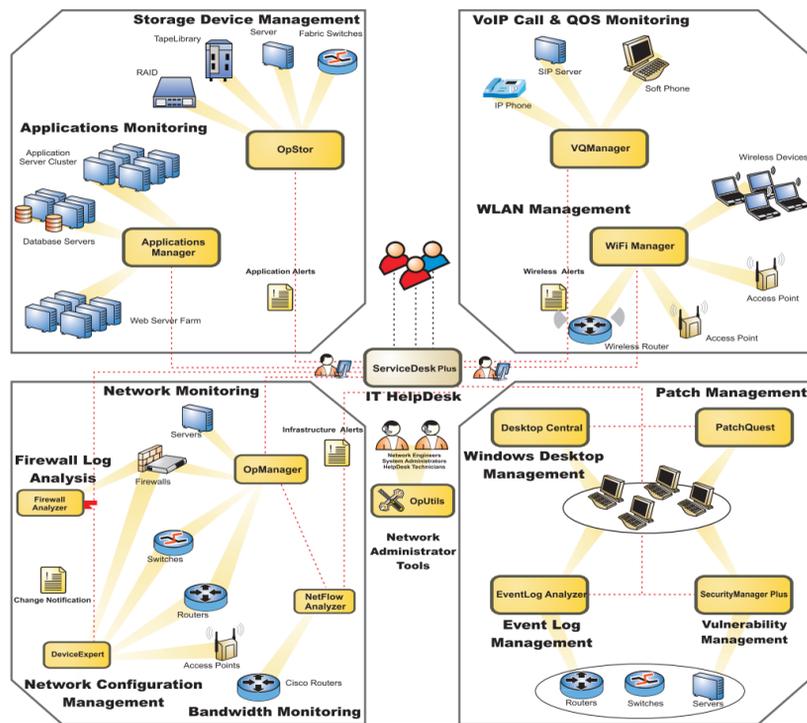

www.manageengine.com

A refreshingly different approach to Enterprise Management

To accurately pin-point the root cause of failures and to implement a proactive management solution, IT professionals need an integrated solution that works across Networks, Servers and Applications. However, the complexity, cost and time involved in deploying traditional frameworks often force them to look at alternative point solutions that focus on niche areas. While there is no dearth of point solutions available in the market today, when it comes to identifying the exact cause of the problem, these point solutions fail miserably. As a result, IT is always seen as reacting to failures and fire fighting. Having a proactive solution remains a distant dream.

ManageEngine aims to bridge this gap by providing small and medium enterprises with an alternative that offers an integrated solution that works across Networks, Systems and Applications without the associated costs or complexity. Test drive ManageEngine today for a refreshingly different experience ...

Adventnet Enterprise Management Solution Map

About AdventNet

Founded in 1996, AdventNet is a software company with a broad portfolio of elegantly designed, affordable products and web services. AdventNet offerings span a spectrum of vertical areas, including network & systems management (ManageEngine.com), security (SecureCentral.com), collaboration, CRM & office productivity applications (Zoho.com), database search and migration (SQLOne.com), and test automation tools (QEngine.com). AdventNet has a large and rapidly growing global customers base, and has presence in all the major markets.

Firewall Analyzer

Firewall Log Analysis & Reporting Tool

ManageEngine Firewall Analyzer is a web-based, agent-less firewall, vpn & proxy server log analysis software. It collects, correlates, and reports on logs from enterprise-wide firewalls, VPN and proxy servers and helps network administrators gain useful information from device logs instantly and identify inappropriate web usage by employees. It can analyze incoming and outgoing traffic / bandwidth patterns, identify virus attacks by host, port & type, understand protocol usage by user, source & destination.

www.fwanalyzer.com

Features

- Support for most enterprise firewalls, vpn & proxy server log formats
- Comprehensive reports with multi-level drill down
- Flexible log archiving
- Automatic detection & configuration
- Threshold-based alerting
- Report Scheduling
- Customizable reports
- Historical Trend Analysis
- Capacity Planning

support@fwanalyzer.com

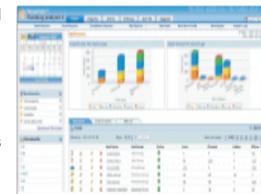

<http://demo.fwanalyzer.com>

EventLog Analyzer

Host-based Security Information Management & Compliance Reporting

ManageEngine EventLog Analyzer is a web-based, agent-less syslog and event log management solution that collects, analyzes, archives, and reports on event logs from distributed Windows host and, syslogs from UNIX hosts, Routers & Switches, and other syslog devices. It helps organizations meet host-based security information management (SIM) objectives and adhere to demands of regulatory compliance requirements like HIPAA, SOX, GLBA, and PCI.

www.eventloganalyzer.com

Features

- Flexible event log & syslog collection
- Automated event log archiving
- Pre-defined reports on top hosts, top events, and more
- Compliance reporting to meet GLBA, HIPAA, PCI, SOX acts
- Real time alerting & notification
- Security analysis
- Scheduled Reporting
- Multiple Report Export Formats

DeviceExpert

Network Change & Configuration Management

ManageEngine DeviceExpert is a web-based Network Change and Configuration Management (NCCM) solution that enables the Network Administrator to efficiently manage the configurations of Network Devices such as switches, routers, firewalls, wireless access points, integrated access devices and others from multiple vendors such as Cisco, HP, 3com Foundry, FortiGate, NetScreen, Nortel and others.

Features

- Multi-vendor configuration for switches, routers, firewalls and other devices
- Encrypted storage of device configuration in database
- Real-time configuration tracking and effective change management policies
- Roll back unauthorized configuration changes
- Altering mechanism to monitor configuration changes
- Contextual, side-by-side comparison of altered configuration
- Scripting support to automate time consuming tasks like password rotation
- Role-based access control for device configuration & approval mechanism for changes
- Comprehensive Audit Trails
- Detailed reports on Inventory and configuration changes
- Built-in disaster recovery mechanism to recover system in the event of failure

VQManager

VoIP Quality Monitoring

ManageEngine VQManager is a web-based, real-time VoIP Quality Monitoring tool that can monitor any VoIP equipment that supports SIP(RFC 3261), Cisco Skinny and RTP/RTCP(RFC 3550). It enables IT administrators to monitor their VoIP network for QoS parameters, bandwidth utilization and Call traffic & trends. VQManager aids troubleshooting VoIP calls for failures and quality deterioration through instantaneous reports, self-configurable alerts & in-depth fault probing – all from a single web interface. With over 25 built-in reports, VQManager gives network administrators comprehensive insight about bandwidth usage and traffic patterns over time.

VQManager requires no other special hardware/software for support and it's remotely accessible, user-friendly interface saves precious time & greatly improves administrator productivity. With minimal to zero deployment efforts, VQManager is your fastest and most cost-effective way of ensuring an optimized VoIP communication infrastructure.

Features

- Provides monitoring of Cisco Call Manager 4.x and 5.x based on Skinny protocol or CDR/CMR logs
- Proactive, real-time monitoring of the QoS & Bandwidth of VoIP Network
- Bandwidth usage and trend analysis for troubleshooting & capacity planning
- Alarm generation based on QoS metrics & call statistics thresholds
- Graphical representation of call flow plotting end-to-end Call Control information
- Comprehensive reports to graphically represent historic traffic patterns in the network.

WiFi Manager

WLAN Management & Security

WiFi Manager is an integrated WiFi security and management solution. It detects 100s of wireless threats such as rouge access points, rouge clients, adhoc networks, denial-of-service attacks, hardware mis-configurations, and any vulnerability that exists in your Wireless Networks. It also helps managing 1000s of access points from a centralized location.

Features

- Detect and block rouge access points
- Detect intrusion attempts & vulnerabilities
- Detect denial-of-service attacks
- Manage 70+ models of access points, routers and gateways centrally
- Upgrade firmware of access points & configure groups of access points in one click
- Alert appropriate network personnel when network faults occur
- Visualize network performance through reports
- 24x7 real-time RF monitoring dedicated IDS sensors

OpManager

Bring Business Perspective to Network Management

ManageEngine OpManager is a complete network monitoring software that provides high level business-centric fault and performance management across WAN, Servers, and Applications. By providing a service centric view of IT, OpManager helps take a proactive approach to network management. OpManager focuses on bringing a powerful set of functionalities essential for today's businesses into easy-to-use affordable solutions. By bringing a business perspective to network management, OpManager delivers the functionality of expensive solutions at the ease of smaller software- delivering to you the best of both worlds!

Features

- Network management with complete WAN visibility, availability, performance and fault monitoring
- Datacenter management with Server, Exchange, Database, Active Directory and UPS monitoring
- Overall IT management with URL monitoring, CPU memory and disk utilization statistics, services, applications and eventlog monitoring
- Business-service management with Business level Views and dashboards
- Service Level Management and Tracking with real-time service specific availability information
- Improved discovery with a combination of NMAP, WMI, SNMP and CLI
- One-touch configuration with Device Templates
- Simplified interface management with in-depth, at-a-glance report

OpManager MSP Edition

Managed Network Services

OpManager MSP Edition enables VARs and System Integrators to offer reliable and secure managed network monitoring services to numerous small and medium sized organizations. With the MSP Edition you can monitor unlimited number of client devices such as servers, firewalls, Exchange servers, Active Directory servers, routers, switches, etc. remotely from a central location. By incorporating industry best practices, the MSP Edition ensures you deliver cost-effective, secure, and reliable network monitoring services to your customers, thereby offering unparalleled value. The OpManager MSP Edition is a comprehensive 'out-of-the-box' solution to put a Managed Network Services solution provider in business. It is ideal for MSPs who are interested in keeping their customer's networks performing at an optimal level, reduce service costs, and increase productivity while improving customer satisfaction and retention.

Features

- Secure remote monitoring - Secure HTTPs connection for probe-server communication.
- Unlimited Device Monitoring - Monitor unlimited number of customer devices from a central location.
- Customer portal for your customers to login and see what you monitor for them.
- Customer Specific Reports - Give Customers the info they want; generate reports specific to them.
- Exchange Monitoring - Effectively monitor Exchange 2000/2003 servers. Identify potential problems and performance degradations before they turn into costly downtime.
- Rebranding - Rebrand MSP Edition and roll out your own services.

ServiceDesk Plus

www.servicedeskplus.com

IT Help Desk & Asset Management Software

ManageEngine ServiceDesk Plus is a complete web-based Help Desk Software with Asset Management capabilities. It offers an integrated package with Request Management (Trouble Ticketing), Asset Tracking, Purchasing, Contract Management, Self-Service Portal, and Knowledge Base at an affordable price point. ServiceDesk Plus provides all that you need to have a full-fledged IT Help Desk and a productive Help Desk staff. ServiceDesk Plus is ITIL ready and includes modules like Incident Management, Problem Management, Change Management and CMDB.

Features

- Simple installation and no complex customizations
- Automate repetitive tasks like ticket dispatch and notifications
 - Auto discover assets, including hardware and software details
- Better understand relationships between assets
- Remote password reset
- Respond to customers on time
- Better utilize support resources
- Study impact on SLAs

ServiceDesk Plus Editions

Standard Edition - Help Desk only

Professional Edition - Includes Help Desk and Asset Management

Enterprise Edition - ITIL Ready Service Management

OpUtils

www.oputils.com

System & Network Monitoring Toolset

OpUtils is a web-based Network Monitoring & troubleshooting toolset for System Administrators. It includes over 45+ unique tools categorized as Network Diagnostics, Address Management, Server Management, Cisco Tools, Network Monitoring, and SNMP Tools. It also provides out-of-the-box reports about the network and its devices.

Features

- Switch Port Mapper
- Bandwidth Monitor
- IP Address Manager
- Wake on LAN
- Rogue Detection
- Config File Manager
- SNMP Trap Receiver
- MAC - IP Resolver

Security Manager Plus

www.securitymanagerplus.com

Network Vulnerability Scanner with Patch Management

Security Manager Plus is a network security scanner that proactively reports on network vulnerabilities and helps to remediate them and ensure compliance. With vulnerability scanning, open ports detection, patch management and vulnerability reporting capabilities, Security Manager Plus is exactly the software you need to protect your network from security threats and malicious attacks.

Features

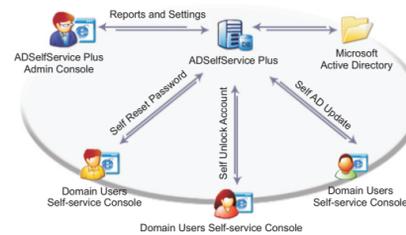

- Scans your enterprise network non-intrusively (both agentless & agent-based)
- Provides detailed inventory of your network assets
- Assesses network vulnerabilities and identifies devices that are exposed to such vulnerabilities
- Remediate vulnerable Windows systems by deploying missing patches and service packs
- Provides remediation solutions to mitigate risks, thus paving way for a more secure IT environment
- Generates comprehensive audit reports to understand your network security posture, thereby ensuring compliance

ADSelfService Plus

www.adselfserviceplus.com

Self Reset Password, Self Unlock Account, Self Directory Update

Reduce Help Desk Cost and Increase User Productivity with ADSelfService Plus

ADSelfService Plus is a secure, web-based end-user program that allows a domain user to enroll and perform, day-to-day help desk activities like password reset, Account unlock or update user information in Active Directory all by himself. Thus it helps in a large scale to eliminate a leading source of help desk calls and associated expenses by automating password resets and account unlocks thereby optimizing user productivity.

Features

- Self reset passwords and unlock accounts securely.
- Self update of personal information in Active Directory.
- Schedule password expiry e-mail notification.
- Reporting on user accounts and their password status.
- Maintain comprehensive audit trails for all password activity using ADSelfService Plus.

ADManager Plus

<http://www.admanagerplus.com>

Windows Active directory management

ADManager Plus is a comprehensive web-based Active Directory Management software that simplifies User provisioning and Active Directory administration. The solution features a single console from which users, computers, contacts, groups and reports on Active Directory environment can be viewed and managed. ADManager Plus avoids manual, error prone administrative activities on Active Directory and saves time and cost.

Features

- Facility to create multiple users using CSV/template-based wizards.
- Managing passwords for user accounts in Active Directory.
- Managing user mailboxes in Exchange Servers.
- File Server management for Active Directory users.
- Perform cleanup operations, delete/disable/move Active Directory accounts.
- Extensive reporting capabilities on various aspects of Security, Password and Objects helps to ensure consistent performance of Active Directory.
- Delegation features that ease workload on administrators.
- A self-service portal that lets employees to update their own directory information with restrictions set by administrator.

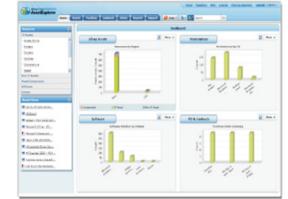

support@admanagerplus.com

AssetExplorer

www.assetexplorer.com

Asset Management Software

ManageEngine AssetExplorer is comprehensive Asset Management Software that offers enterprise-wide asset visibility and control to manage all your IT and Non-IT assets. ManageEngine AssetExplorer offers a single view to track and manage ownership of all your assets.

Features

- Scan IT assets
- Software License Management
- Asset Contracts
- Track Asset Ownership
- Software Compliance
- PO with approvals
- Hardware & Software Inventory
- Software Usage Tracking
- Audit History

support@assetexplorer.com
<http://demo.assetexplorer.com>

SupportCenter Plus

www.supportcenterplus.com

Customer Service and Support

SupportCenter Plus is a 100% web-based Customer Service and Support Software that offers Trouble Ticketing, Account & Contact Management, SLA Management and Knowledge base in one low-cost, easy-to-use package. It helps you track and resolve customer issues quickly, thereby delivering superior customer support and taking customer satisfaction to the next level. SupportCenter Plus enables customers to submit trouble tickets via a browser or through email. It automates several key workflow tasks such as case routing, acknowledging requester/support rep notifications and handling of SLA rules. As a result, your support organization can now realize higher levels of productivity, keep everyone informed, provide superior service, improve problem resolution times, share knowledge effectively and keep customers happy.

Features

- Reduce Support Load with Self Service Portal
- Track and Manage Issues effectively to ensure Customer Satisfaction
- Empower Support Representatives to handle issues with searchable Knowledge base
- Comprehensive Service Level Agreement(SLA) Management
- Manage Multiple Contacts and Accounts
- Track Product Details with the Product Catalog

support@supportcenterplus.com

NetFlow Analyzer

Simplified Bandwidth Monitoring

www.netflowanalyzer.com

ManageEngine NetFlow Analyzer Professional Edition is a web-based bandwidth monitoring tool that uses Cisco NetFlow (v5/v7/v9), Cisco NBAR and sFlow data exported from routing devices to analyze network traffic and report on bandwidth usage across your network. It also lets you know what applications are using bandwidth, who is using them and for how long. This is ideal for small & medium enterprises that need to manage less than 600 interfaces in their setup.

Features

- Upto 1 minute granularity on traffic reports for upto 1 year
- Real time reports with up to the second visibility
- Top applications, source, destination, ToS, DSCP and AS reports
- Every conversation stored for upto 1 month for troubleshooting
- Aggregated data stored forever for historic reporting
- Ability to create IP based department of division
- Alerting based on threshold violations and when link is down
- Advanced applications categorization based on port and IP address
- Automatic scheduling of daily, weekly, monthly reports etc
- Integrated with Google Maps for network visualization

support@netflowanalyzer.com

<http://demo.netflowanalyzer.com>

NetFlow Analyzer Enterprise Edition

When it comes to network troubleshooting

www.netflowanalyzer.com/ee

NetFlow Analyzer Enterprise Edition is what businesses the world over rely on when it comes to optimizing their network for peak performance. To get the best out of your network, you need indepth visibility. NetFlow Analyzer gives you just that. An unmatched visibility into your network in real-time and insights into how your traffic impacts your overall network health. NetFlow Analyzer uses Cisco® NetFlow data exported from routing devices, to analyze network traffic and report on bandwidth usage across your network.

Features

- Central Server capable of handling upto 25 collectors
- Each Collector can handle about 2000 interfaces
- User configurable IP based department / divisions
- Easy addition and modification of custom applications
- Alerting based on threshold violation - email and SNMP trap
- Every conversation stored for upto 1 month for troubleshooting
- Aggregated data stored forever for historic reporting
- Automatic scheduling of daily, weekly, monthly reports etc
- Privilege based user access levels available
- Free 30-day evaluation with no restriction on features

Applications Manager

Integrated Applications, Server and Database Monitoring Software

www.appmanager.com

ManageEngine Applications Manager is an Availability and Performance Management Solution that proactively monitors Business Applications and help enterprises ensure that their web applications meet end user expectations.

IT Administrators and Operators can now manage their Internet Data Centers effectively by using the fault management and notification capabilities.

Features

- Business centric view to your applications and server monitoring.
- Visualize how your web applications respond and measure the end user experience.
- Availability and Performance management for application servers, databases, servers and custom applications.
- SOAP Web Services Monitoring.
- End to End Java / J2EE Web Transaction Monitoring.
- Powerful reporting helps Administrators plan inventory and empowers the Line of Business Managers.

The Agent-less monitoring capability includes performance management for application servers (JBoss, WebSphere, WebLogic, WebLogic Integration, Tomcat, Oracle AS, Microsoft .NET), databases (Oracle, IBM DB2, MS SQL Server, MySQL, Sybase), Servers, SAP, Java / J2EE Web Transactions and web applications.

Professional Edition: Small and Medium deployments

Enterprise Edition: Supports a distributed architecture that scales for large deployments

OpStor

Multi-vendor Storage Infrastructure Monitoring

www.opstor.com

ManageEngine OpStor is a comprehensive multi-vendor and multi device storage management infrastructure monitoring tool offering fault recording, performance measuring, inventory and business reporting functions through a simple browser based webclient software. It notifies problems in the storage network through e-mail, SMS etc., and provides graphs and reports that display performance and availability data of storage elements.

Features

- Inventory information of switch & switch ports
- Cisco VSAN information
- Switch ports monitoring
- Reports:
 - Availability reports for switch & switch ports
 - Performance reports for switch ports
 - Bandwidth Utilization
 - Port Frame Error Rate
 - Port In & Out Drop Rate
 - Rx & Tx Utilization
 - Switch summary
 - Real time graphs which are SNMP based, non-intrusive, live performance data collected from
- SNMP trap based alarms
- Launch of telnet/applet client for configuration

OpStor provides monitoring and management of the following

- Cisco Switches.
- VoIP Quality Monitoring
- Multi-vendor Storage Infrastructure Monitoring
- Cisco MDS 9000 Series Switches
- Cisco SN 5428-K9 Storage Router.
