WiFi Manager

www.wifimanager.com

WLAN Management & Security

WiFi Manager is an integrated WiFi security and management solution. It detects 100s of wireless threats such as rouge access points, rouge clients, adhoc networks, denial-of-service attacks, hardware mis-configurations, and any vulnerability that exists in your Wireless Networks. It also helps managing 1000s of access points from a centralized location.

Features

- Detect and block rouge access points
- Detect intrusion attempts & vulnerabilities
- Detect denial-of-service attacks
- Manage 70+ models of access points, routers and gateways centrally
- Upgrade firmware of access points & configure groups of access points in one click
- Alert appropriate network personnel when network faults occur
- Visualize network performance through reports
- 24x7 real-time RF monitoring dedicated IDS sensors

Firewall Analyzer

www.fwanalyzer.com

Firewall Log Analysis & Reporting Tool

ManageEngine Firewall Analyzer is a web-based, agent-less firewall, vpn & proxy server log analysis software. It collects, correlates, and reports on logs from enterprise-wide firewalls, VPN and proxy servers and helps network administrators gain useful information from device logs instantly and identify inappropriate web usage by employees. It can analyze incoming and outgoing traffic / bandwidth patterns,identify virus attacks by host, port & type, understand protocol usage by user, source & destination.

Features

- Support for most enterprise firewalls, vpn & proxy server log formats
- Comprehensive reports with multi-level drill down
- Flexible log archiving
- Automatic detection & configuration
- Threshold-based alerting
- Report Scheduling
- Customizable reports
- Historical Trend Analysis
- Capacity Planning

support@fwanalyzer.com   http://demo.fwanalyzer.com

EventLog Analyzer

www.eventloganalyzer.com

Host-based Security Information Management & Compliance Reporting

ManageEngine EventLog Analyzer is a web-based, agent-less syslog and event log management solution that collects, analyzes, archives, and reports on event logs from distributed Windows host and, syslogs from UNIX hosts, Routers & Switches, and other syslog devices. It helps organizations meet host-based security information management (SIM) objectives and adhere to demands of regulatory compliance requirements like HIPAA, SOX, GLBA, and PCI.
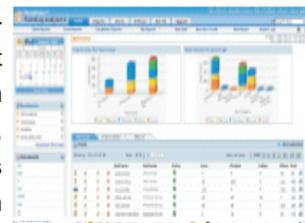

Features

- Flexible event log & syslog collection
- Automated event log archiving
- Pre-defined reports on top hosts, top events, and more
- Compliance reporting to meet GLBA, HIPAA, PCI, SOX acts
- Real time alerting & notification
- Security analysis
- Scheduled Reporting
- Multiple Report Export Formats

Desktop Central

www.desktopcentral.com

Windows Desktop Management Software

Desktop Central is a Web-based Windows Desktop Management Software that provides Configurations, Patch Management, Service Pack Installation, Software Installation, Hardware & Software Inventory, Desktop Sharing & System Tools, Active Directory Reports, and User Logon Reports.

Features

- Configurations for Windows Applications, Security, Users and Systems.
- Patch Management
- Service Pack Installation
- Software Installation
- Hardware & Software Inventory
- Desktop Sharing & System Tools
- Active Directory Reports
- User Logon Reports

ManageEngine ™
**IT Management Made Easy**

www.manageengine.com
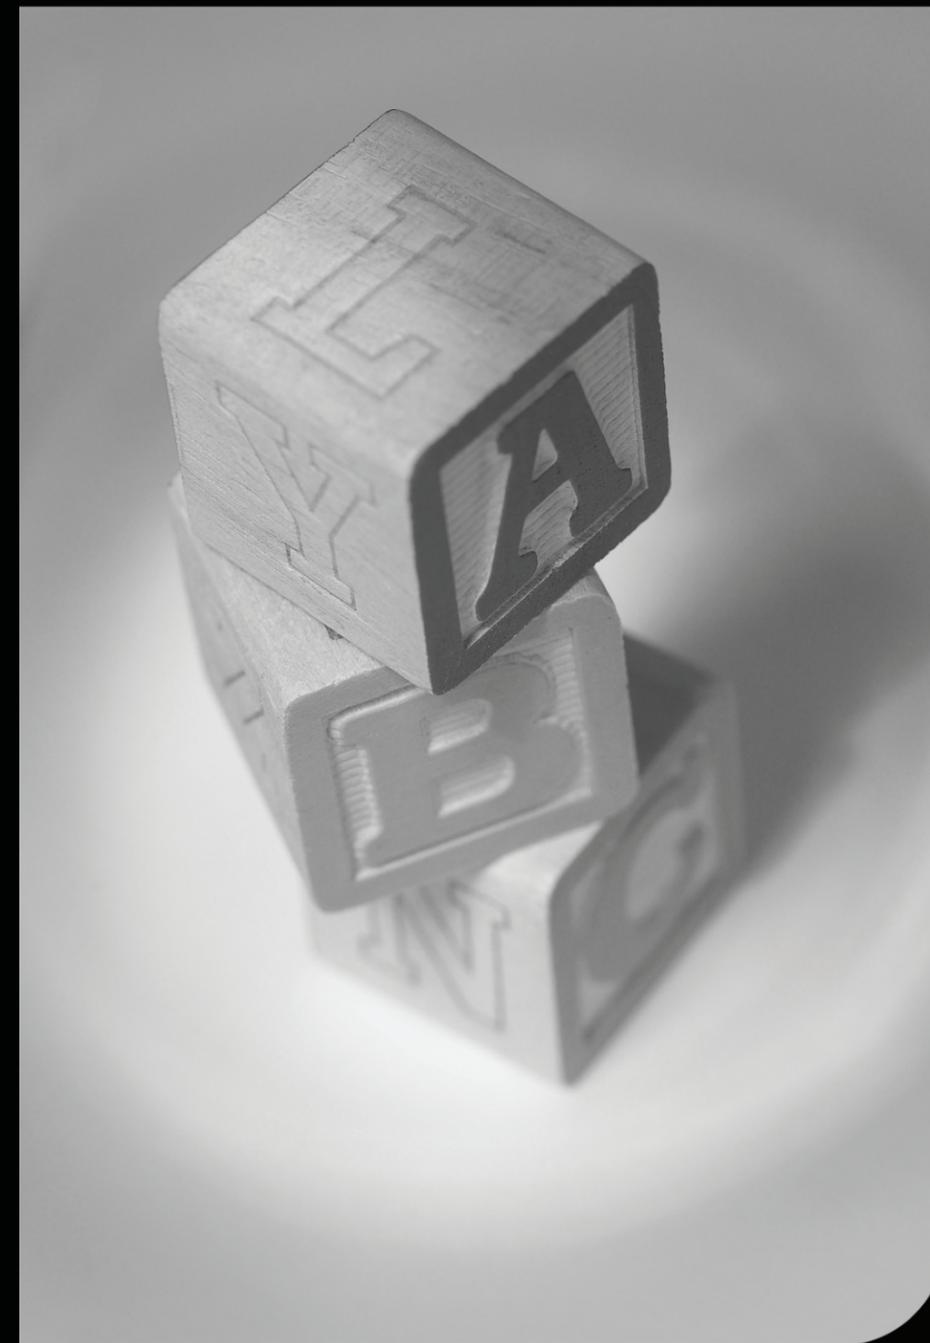

A refreshingly different approach to Enterprise Management ....

To accurately pin-point the root cause of failures and to implement a proactive management solution, IT professionals need an integrated solution that works across Networks, Servers and Applications. However, the complexity, cost and time involved in deploying traditional frameworks often force them to look at alternative point solutions that focus on niche areas. While there in no dearth of point solutions available in the market today, when it comes to identifying the exact cause of the problem, these point solutions fail miserably. As a result, IT is always seen as reacting to failures and fire fighting. Having a proactive solution remains a distant dream.

ManageEngine aims to bridge this gap by providing small and medium enterprises with an alternative that offers an integrated solution that works across Networks, Systems and Applications without the associated costs or complexity. Test drive ManageEngine today for a refreshingly different experience ...

Adventnet Enterprise Management Solution Map
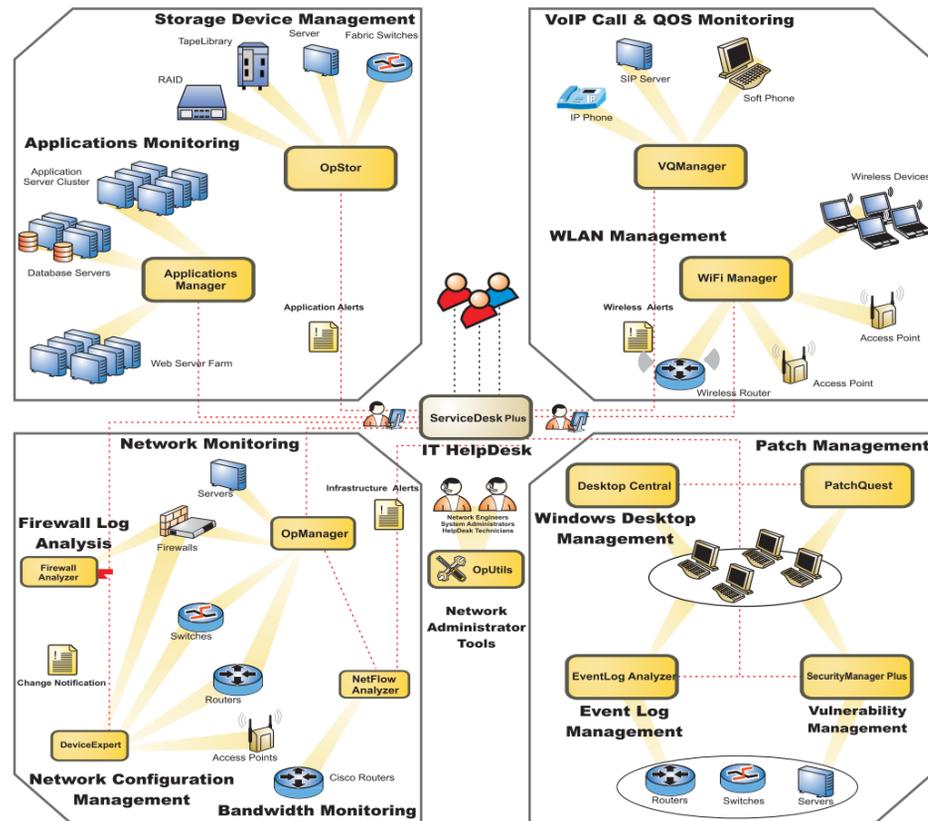

About AdventNet

Founded in 1996, AdventNet is a software company with a broad portfolio of elegantly designed, affordable products and web services. AdventNet offerings span a spectrum of vertical areas, including network & systems management (ManageEngine.com), security (SecureCentral.com), collaboration, CRM & office productivity applications (Zoho.com), database search and migration (SQLOne.com), and test automation tools (QEngine.com). AdventNet has a large and rapidly growing global customers base, and has presence in all the major markets.

OpManager MSP Edition
msp.opmanager.com

Managed Network Services

OpManager MSP Edition enables VARs and System Integrators to offer reliable and secure managed network monitoring services to numerous small and medium sized organizations. With the MSP Edition you can monitor unlimited number of client devices such as servers, firewalls, Exchange servers, Active Directory servers, routers, switches, etc. remotely from a central location. By incorporating industry best practices, the MSP Edition ensures you deliver cost-effective, secure, and reliable network monitoring services to your customers, thereby offering unparalleled value. The OpManager MSP Edition is a comprehensive 'out-of-the-box' solution to put a Managed Network Services solution provider in business. It is ideal for MSPs who are interested in keeping their customer's networks performing at an optimal level, reduce service costs, and increase productivity while improving customer satisfaction and retention.
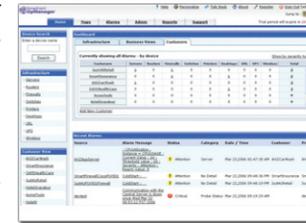

probe for
unlimited device monitoring

Features

- Secure remote monitoring - Secure HTTPs connection for probe-server communication.
- Unlimited Device Monitoring - Monitor unlimited number of customer devices from a central location.
- Customer portal for your customers to login and see what you monitor for them.
- Customer Specific Reports - Give Customers the info they want; generate reports specific to them.
- Exchange Monitoring - Effectively monitor Exchange 2000/2003 servers. Identify potential problems and performance degradations before they turn into costly downtime.
- Rebranding - Rebrand MSP Edition and roll out your own services.

PatchQuest
www.patchquest.com

Patch Management Software

PatchQuest is an automated patch management software for distributing and managing patches, security hotfixes and updates across heterogeneous networks comprising Windows and Linux systems, in just a few simple clicks. It efficiently scans your enterprise network, identifies missing patches and software updates, distributes patches to vulnerable systems and keeps your systems up-to-date and free from vulnerabilities, thus paving way for a more secure enterprise environment. PatchQuest's optional agent architecture gives you the flexibility to manage systems effectively.
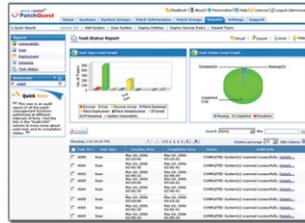

Features

- Flexible modes of operation - agent-based, agentless or both
- Multi-OS vulnerability scanning and patching
- Web-based administration console for universal secure-access to data views and configurations
- Cross-platform product installation
- Intelligent patch assessment and validation
- Simplified patch & service pack deployment
- Automated, policy-based update management
- Gamut of reports to facilitate quick access to the data you need

support@patchquest.com   http://demo.patchquest.com

PasswordManager Pro
www.passwordmanagerpro.com

Password Management for Shared and Service Accounts

PasswordManager Pro (PMP) is a web-based Password Management Solution for enterprises to control the access to shared administrative/privileged passwords of any 'enterprise resource' such as servers, databases, network devices, applications etc. PMP enables IT managers to enforce standard password management practices such as maintaining a central repository of all passwords, usage of strong passwords, frequent changing of sensitive passwords and controlling user access to shared passwords across the enterprise.

Features

- Secure, centralized repository of passwords
- Active Directory/LDAP Integration
- Password ownership & sharing
- Role-based access control & user groups
- Real-time notifications on password events
- Automated, remote password changing
- Password policies & compliance reporting
- Comprehensive audit of all user access to passwords
- Setting password expiry
- Tools for backup & disaster recovery

SecurityManager Plus
www.securitymanagerplus.com

Vulnerability Assessment & Remediation

Security Manager Plus is a network security scanner that proactively reports on network vulnerabilities and helps to remediate them and ensure compliance. With vulnerability scanning, open ports detection, patch management and vulnerability reporting capabilities, Security Manager Plus is exactly the software you need to protect your network from security threats and malicious attacks.

Features

- Scans your enterprise network non-intrusively (both agentless & agent-based)
- Provides detailed inventory of your network assets
- Assesses network vulnerabilities and identifies devices that are exposed to such vulnerabilities
- Remediates vulnerable Windows systems by deploying missing patches and service packs
- Provides remediation solutions to mitigate risks, thus paving way for a more secure IT environment
- Generates comprehensive audit reports to understand your network security posture, thereby ensuring compliance
