

GLBA Compliance

with O365 Manager Plus

About GLBA

The Gramm-Leach-Bliley Act (GLB Act or GLBA) is also known as the Financial Modernization Act of 1999. It is a United States federal law that requires financial institutions to explain how they share and protect their customers' private information. To be GLBA compliant, financial institutions must communicate to their customers how they share the customers' sensitive data, inform customers of their right to opt-out if they prefer that their personal data not be shared with third parties, and apply specific protections to customers' private data in accordance with a written information security plan created by the institution.

The primary data protection implications of the GLBA are outlined its Safeguards Rule, with additional privacy and security requirements issued by the FTC's Privacy of Consumer Financial Information Rule (Privacy Rule), created under the GLBA to drive implementation of GLBA requirements. The GLBA is enforced by the FTC, the federal banking agencies, and other federal regulatory authorities, as well as state insurance oversight agencies.

Please note that the efforts and procedures required to establish compliance in each section may vary in different organizations depending on their systems configuration, internal procedures, nature of business, and other factors.

Usage of the below mentioned reports may not guarantee complete organizational compliance. This document can be used as a reference guide for complying with GLBA industrial mandate.

GLBA compliance with O365 Manager Plus

To comply with industrial mandates various control methods have to implemented. For management simplicity we have mapped the compliance requirements with the required control methods. You can find the reports required to complete the control methods subsequently. Though mentioned separately, all the control methods are interlinked and often required by most of the regulations.

ManageEngine
O365 Manager Plus

O365 Manager Plus is an extensive Office 365 tool used for reporting, managing, monitoring, auditing, and creating alerts for critical incidents. With its user-friendly interface, you can easily manage Exchange Online, Azure Active Directory, Skype for Business, OneDrive for Business, Microsoft Teams, and other Office 365 services from a single console.
