 RELATED  PRINT  EMAIL  FEEDBACK  ADD THIS  BLOG THIS

-(Marketwire) -- 05/12/11 --

- Built on a **robust SaaS framework** to deliver a scalable, highly available and secure solution on the cloud.
- Combines **network and server monitoring** with fault and performance management in a unified application.
- Flexible and easy **pricing options**, including a Free edition.

Interop Booth 1859 -- **ManageEngine**, makers of a globally renowned suite of cost effective network, systems and security management software solutions, today announced the general availability of **OpManager On-Demand**, an integrated network and systems management suite for enterprise administrators and Managed Service Providers (MSPs) alike.

"The feedback we received during the application's beta period helped us develop a solution that is capable and easy to setup and use," said Rajesh Ganesan, Director, ManageEngine. "The SaaS delivery model of OpManager On-Demand addresses a big productivity challenge of managing the management systems for enterprises and MSPs. This directly allows the IT teams to give undivided focus in ensuring highest availability of their business critical systems and applications and that indirectly means success of the business."

Getting started with OpManager On-Demand is fast and easy. Enterprise administrators simply **sign-up** for an On-Demand account, download the lightweight probe, initiate discovery of the networked devices to be monitored and begin receiving communications from the probe to the central server. The process is the same for MSP's, except that they will also be able to establish unique Customer Accounts for the clients with which they work.

For both enterprise administrators and MSPs, OpManager On-Demand offers

Is Cloud Computing for Real?

By Jill Tummler Singer

Elad Israeli wrote: I can relate to many points you list here. I come from the business intelligence space, where the Cloud and SaaS are way overhyped - mainly due to some startups in the space.

HP's Eye on Autonomy Means It Sidesteps RDB and Middleware

By Dana Gardner

We now know that HP is basing its future of the business of supporting businesses, and in working to dominate the next growth areas:

Information use and management. We knew that HP was in acquisition mode for enterprise software, and it seems the \$10 billion apple in HP's eye is UK-based software g...

critical insight into the health of the network and connected devices through real-time [reporting](#). Reports can be automated to run at assigned intervals and customized to display the status of servers, switches, routers, services and more.

Other [benefits](#) offered by OpManager On-Demand include:

Scalability: OpManager On-Demand's grid-enabled central server, hosted in ManageEngine's secure data centers, relieves administrators from the need to add server resources as demand grows.

Reliability: Supported by a grid enabled architecture, hardware redundancy and regularly scheduled data back-ups, OpManager On-Demand is designed for continuous availability.

Automated upgrades: Application upgrades occur more frequently with OpManager On-Demand than with traditional, installed software. Client level upgrades have zero downtime, while probe upgrades will be less frequent with very minimal downtime. All upgrade processes are automated.

Availability and Pricing

ManageEngine OpManager On-Demand is available now. Pricing depends upon the duration of the subscription and the number of objects to be managed. [Plans and Pricing](#) details are available online.

About ManageEngine

ManageEngine is the leading provider of cost-effective enterprise IT management software and the only one making the 90-10 promise -- to provide 90 percent of the capabilities offered by the Big 4 at just 10 percent of the price. The ManageEngine suite offers enterprise IT management solutions including Network Management, HelpDesk ITIL, Bandwidth Monitoring, Application Management, Desktop Management, Security Management, Password Management, Active Directory reporting, and a Managed Services platform. ManageEngine products are easy to install, setup and use and offer extensive support, consultation, and training. More than fifty thousand organizations from different verticals, industries, and sizes use ManageEngine to take care of their IT management needs cost effectively. ManageEngine is a division of ZOHOO Corporation. For more information, please visit www.manageengine.com.

Interview: How Can IT Adjust to Financial Pressures?

By Dana Gardner

Rather than focusing on the internal process efficiency and effectiveness within the four walls of a company, CIOs are starting to realize that the next wave of productivity will be outside their four walls, what some refer to as inter-enterprise collaboration. A number of major trends are changing...

Will Your Organization Need a CIO by 2020?

By Amitabh Apte

The title of my new post is provocative. Why would I ask such a question, especially after covering number of CIO surveys, trends, leading CIO thought leaders and underlining the strategic importance of IT in this very blog? I am asking this question because the IT Landscape as you and I know it, it...

Putting Clouds in Perspective – Cloud Redefined

By John Treadway

You'd think as we head into the waning months of 2011 that there'd be little left to discuss regarding the definition of cloud IT. Well, not quite yet. Having spent a lot of time with clients working on their cloud strategies and planning, I've come to learn that the definition of cloud IT is fund...

What Is SaaS? | Software-as-a-Service Myopia

By Joel York

What is SaaS? Software delivered as a service? As in renting, not owning the software. Or, is SaaS a service layered over software? As in a complete solution, not a tool. It seems a little late in the game for me to be asking a question like "What is SaaS?" But, I've always harbored a few embarra...

Cloud Expo Breaking News

Basics of Automating a Cloud Storage Service at Cloud Expo Silicon Valley

By Pat Romanski

"Cloud" has become the number one priority for so many businesses, yet the complexity of providing IT as a Service is daunting. Specifically, the complexity of combining server virtualization with storage virtualization, automation, self-service catalogs and other enabling technologies has become a huge barrier for the IT teams that have to deliver the cloud services. In his session at the 9th International Cloud Expo, Azmir Mohamed, Senior Director Product Management at Abiquo, will discuss h...

The Value Chain of Supply Chain at Cloud Expo Silicon Valley

By Liz McMillan

When HighJump Software wanted to enter the on-demand warehouse management market without costly re-architecting of its legacy client/server apps; its solution was a public, multi-tenant cloud. Highjump knew it needed flexibility, speed and the ability to scale up quickly to meet end-user demands, but couldn't sacrifice enterprise-grade security and availability or its renowned customer service levels. Was public cloud ready for the challenge of serving its mission-critical enterprise app to manu...

Networking Under the Cloud at Cloud Expo Silicon Valley

By Elizabeth White

To support public and private clouds, data center infrastructure must deliver rapid provisioning, elasticity to grow and shrink on demand, and the ability for customers and users to pay for what they use. Unfortunately, because the network isn't agile, it's often the bottleneck for cloud adoption. You must find a way to make layer 4/7 network services such as load balancing, VPNs/firewalls, IDS/IPS, etc., less hardware-dependent while maintaining the ability to scale out. In his session at the...

The Only Enterprise IT Event in 2011 Covering the Entire Scope of the Cloud Computing Spectrum

Cloud Expo was announced on February 24, 2007, the day the term "cloud computing" was coined. That same year, the first Cloud Expo took place in New York City with 450 delegates. Next June, Cloud Expo is returning to New York with more than 10,000 delegates and over 600 sponsors and exhibitors.

"Cloud" has become synonymous with "computing" and "software" in two short years. Cloud Expo is the new PC Expo, Comdex, and InternetWorld of our decade. By 2012, more than 50,000 delegates per year will participate in Cloud Expo worldwide.

The cloud is certainly a compelling alternative to running all applications within a traditional corporate data center. But moving from theory into practice is where things get complicated, and this is where attending a top industry event like Cloud Expo comes in.

No one can take full advantage of cloud computing without first becoming familiar with the latest issues and trends, which is why the organizing principle of the 8th International Cloud Conference & Expo on November 7-10, 2011 - is to ensure - through an intensive four-day schedule of keynotes, general and breakout sessions, and our bustling Expo Floor - that attending delegates leave the Santa Clara Convention Center with abundant resources, ideas and examples they can apply immediately to leveraging the Cloud, helping them to maximize performance, minimize cost and improve the scalability of their Enterprise IT endeavors.

Delegates will leave Cloud Expo with dramatically increased understanding the entire scope of the entire cloud computing spectrum from storage to security. Whether you're an enterprise or small to medium business, you'll soon be benefiting from the Cloud. Join your peers in Santa Clara November 7-10, and maximize those benefits already in 2011. See you in Silicon Valley!
