LONDON—(BUSINESS WIRE)—

ManageEngine, the real-time IT management company, today announced that it will be showcasing the latest enhancements to Password Manager Pro, the company's Enterprise Privileged Password Management solution along with the rest of its integrated IT management portfolio at booth # $19 & $19 at the Gartner Data Center Summit London, on 27/28th November, 2012. Password Manager Pro offers advanced protection to data centres by helping establish access controls to IT infrastructure, and seamlessly record and monitor all user actions during privileged sessions, providing complete visibility on privileged access.

Data centres represent the nerve centre of IT enterprises. With the presence of a complex mix of databases, network devices, applications and physical and virtual systems, the modern day data centres present a unique challenge for IT operations. With cyber-crime looming large, data centre operations are required to not only be robust and efficient, but also highly secure to ensure business continuity and data integrity.

Though the IT infrastructure in data centres face both external and internal security threats, of late, internal threats seem to be far more alarming as many of the reported security incidents have been caused by malicious insiders. Disgruntled staff, greedy techies, tech-savvy contractors and sacked employees could act with malicious intent and misuse privileged access.

Incidentally, the privileged accounts that grant virtually unlimited access and full controls to the physical and virtual IT resources are all pervasive in the data centres. As uncontrolled administrative access is a potential security threat, properly managing the privileged accounts and monitoring the privileged actions is imperative.

"Consolidating, securing, controlling, managing and monitoring privileged accounts and access have become integral aspects of Data centre Infrastructure Management (DCIM)," said Rajesh Ganesan, director of product management at ManageEngine. "Keeping an eye on the actions carried out by the users during privileged sessions on critical IT resources is absolutely essential both as protective and detective security controls against cyber-attacks."

In a single, unified solution, Password Manager Pro delivers both privileged identity management and session management. It helps enterprises consolidate all the privileged accounts and centrally control them in fully automated fashion, thereby putting an end to the convoluted manual password management practices. Password Manager Pro helps establish access controls across data centres taking care of the access management requirements of DCIM.

Privileged sessions launched from Password Manager Pro can be completely video recorded, archived and played back to support forensic audits. By monitoring all actions performed by privileged accounts during privileged sessions, enterprises can gain complete visibility and counter threats to information security that arise from outside as well as inside the corporate firewall.

In addition, compliance regulations such as PCI-DSS, SOX, HIPAA and others mandate proper access controls to be in place and privileged sessions be fully monitored with a view to protect sensitive data from internal abuse. With selective sharing, role-based access controls, approval workflows, policy enforcing mechanism, real-time alerts and audit trails and first-in-class remote login and session recording capabilities, Password Manager Pro helps enterprises answer the 'who', 'what' and 'when' of privileged access.
