ManageEngine launches OpManager, a data center management software for large enterprises

With the OpManager migration tool, ManageEngine breaks down a key barrier that was preventing users from switching their network management tools. The tool migrates devices, monitors, syslog/trap rules, users and other data into OpManager in a short time thus enabling admins a clear position of choosing the best. The tool currently supports SolarWinds and PRTG as most of the migrating customers switch from these tools. The migration plan comes with a free, two-month license, so users can run OpManager and their current tool in parallel and make a side-by-side comparison of the two solutions. The migration tool is available immediately in OpManager version 11.6 and can be downloaded from the website. OpManager pricing starts at $1,995 for 50 devices.
