About Zoho Corporation

Zoho Corporation, founded in 1996, is a privately held technology company with customers spread across the globe.

Profitable since its inception, the organization now has millions of users around the world and offers a diverse range of products and services.

As the product portfolio diversified, the organization restructured itself into four main divisions: ManageEngine, Zoho.com, Qntrl, and Trainer Central.

ManageEngine

Bringing IT together

Comprehensive IT management software for all your business needs.

- Identity and access management
- Enterprise service management
- Unified endpoint management and security
- IT operations management
- Security information and event management
- Advanced IT analytics

www.manageengine.com

Qntrl

Democratizing Business Process Software

Workflow Orchestration Software for process owners to gain visibility and control over their business processes by automating them.

- Centralization and Visibility
- Process Compliance
- Process Automation
- Workflow-Centric Collaboration
- Reports and Dashboards
- Process Mapping
- Process Extensibility
- Enterprise Security

www.qntrl.com

The Operating System for Business

Zoho has everything businesses need to boost sales, step up productivity, and manage all day-to-day activities.

- Tightly integrated
- Ready for mobile

www.zoho.com

Trainer Central

An all-in-one training platform

Offers a comprehensive toolkit—including a website builder, payments system, and multiple options to create online courses.

- Course builder
- Live virtual classroom
- Drip scheduler
- Website builder
- Custom branding
- Learner portal
- Course certificates
- Business dashboard
- Learner analytics

History

Formerly known as AdventNet Inc., Zoho Corporation started its operations in 1996. It was profitable since its inception and expanded into the Japanese market with network management software by 2001. The company started to diversify in 2005 with the introduction of Zoho Writer. By 2009, as the product portfolio became vast and diverse, the company was rechristened Zoho Corporation, which now serves as the umbrella firm for four distinct divisions: ManageEngine, Zoho.com, Qntrl, and Trainer Central.

Philosophy

No frills. R&D driven. One hundred percent customer-focused. Zoho Corporation believes in providing customers with the best software at affordable prices.

“A customer is the most important visitor on our premises. He is not dependent on us. We are dependent on him. He is not an interruption in our work - he is the purpose of it. We are not doing him a favor by serving him. He is doing us a favor by giving us the opportunity to serve him.”

- Mahatma Gandhi

ManageEngine crafts comprehensive IT management software with a focus on making IT admins' jobs easier. Its 50+ enterprise products cover everything that IT needs, all at affordable prices. From network and device management to security and service desk software, ManageEngine is bringing IT together for an integrated, overarching approach to optimizing IT.

Managing IT together

ManageEngine offers more than 50 enterprise products to help manage all aspects of IT operations, including networks, servers, applications, desktops, mobile devices, service desks, Active Directory, and security. And they have built the tools from the ground up with contextual integrations to make sure that their customers can manage IT together, too.

Simplifying IT together

ManageEngine wants to make IT simple. And no, that does not mean limited functionality. It means fully functional products that have everything that customers need, laid out simply in a UI that won't frustrate users. On top of that, ManageEngine's applications are easy to download, install, configure, and deploy—no third-party support services needed.

ManageEngine's product philosophy is driven by the customer and it has built a strong, in-house R&D team to back that up. Our employees work around the clock to turn product requests into reality. And our software licenses aren't limited by the size of our customers' businesses or what their futures might look like. ManageEngine's software scales with the customer, from small local outfits to large multi-national enterprises.

Valuing IT together

More expensive doesn't always mean better. In fact, ManageEngine has focused its efforts on in-house engineered solutions and taken a simple, transparent approach to the business of IT management software. ManageEngine does not pay extra for an aggressive sales team or costly consultants, and these savings are passed on to the customer. ManageEngine's pricing doesn't include any hidden costs and is available directly on the company's website.

Bringing IT together

At the end of the day, IT is about fulfilling customers' needs. As organizations prepare for the IT management challenges ahead, ManageEngine will lead the way with new solutions, contextual integrations, and other advances that can only come from a company singularly dedicated to its customers. And as a division of Zoho Corporation, ManageEngine will continue pushing for the tight business-IT alignment that its customers will need to seize future opportunities.

ManageEngine

Market Served

ManageEngine crafts the industry's broadest suite of IT management software. It has everything organizations need—more than 50 enterprise products—to manage all components of IT operations. From desktops, mobile devices, networks, and servers, to applications, service desks, Active Directory, and security, ManageEngine brings IT together.

Since 2002, IT teams have turned to ManageEngine for affordable, feature-rich software that's easy to use.

ManageEngine's on-premises and cloud solutions power the IT of over 180,000 companies around the world, including nine out of every ten Fortune 100 companies.

50+

enterprise products
for IT management

More than
3 million IT users

Award-winning
product portfolio and
best-in-class functionality

9/10

Fortune 100 companies are
ManageEngine customers

Serving companies in more
than **190 countries** that manage
complex, multi-vendor, and
hybrid IT infrastructures.

Identity and access management

Active Directory management

Manage, track, and secure Active Directory.

ADManager Plus (On-premises)

Active Directory, Microsoft 365, and Exchange management and reporting

Manage and report on Active Directory, Microsoft 365, and Exchange from a web-based console. Automate user life cycle management, facilitate access governance with workflows, perform secure delegation to the help desk, and satisfy compliance audits.

ADAudit Plus (On-premises)

Real-time Active Directory, file, and Windows server change auditing

Maintain network security and compliance by tracking critical GPO changes, monitoring user logins, analyzing account lockouts, spotting malicious insiders, and more.

ADSelfService Plus (On-premises)

Password self-service, endpoint MFA, conditional access, and enterprise SSO

Implement self-service password management and SSO for logins to Active Directory and enterprise cloud apps. Secure machine (Windows, Linux, and macOS) and VPN logons with MFA. Protect against credential theft with adaptive and risk-based conditional access.

Exchange Reporter Plus (On-premises)

Reporting, auditing, and monitoring for hybrid Exchange and Skype

Monitor Exchange Server, Exchange Online, and Skype for Business and audit changes in real time. Get reports on Exchange entities, such as mailboxes, mail traffic, public folders, OWA, and ActiveSync, and Skype for Business configuration and usage details.

RecoveryManager Plus (On-premises)

Active Directory, Microsoft 365, and Exchange backup and recovery

Perform incremental or full backups and choose from multiple modes of restoration for Active Directory, Azure AD, Office 365, and Exchange environments to protect your data against ransomware and ensure unprecedented resilience during disaster recovery.

ManageEngine
products

ManageEngine products

Identity governance and administration

Orchestrate user identity management and access controls for Zero Trust.

AD360* (On-premises)

Workforce identity and access management for hybrid ecosystems

Manage user identities and access, deploy adaptive MFA, protect privileged accounts with UBA, and ensure regulatory compliance for hybrid environments connecting Active Directory, Azure AD, Exchange, Microsoft 365, and more.

M365 Manager Plus (On-premises)

Microsoft 365 management, reporting, and auditing

Report on, manage, monitor, audit, and create alerts for critical activities in Exchange Online, Azure AD, Skype for Business, OneDrive for Business, Microsoft Teams, and other Microsoft 365 services from one place.

Identity Manager Plus (Cloud)

Secure single sign-on for enterprise applications

Provide users with secure, one-click access to business applications. Centrally manage access to on-premises and enterprise SaaS applications and get deep insights into app usage, user access, and admin activities.

Privileged access management

Control and secure privileged access to critical enterprise systems.

PAM360* (On-premises | MSP)

Complete privileged access security for enterprises

Secure administrative access to critical IT systems. Establish strict governance over privileged access pathways. Prevent security risks using cutting-edge session management capabilities and advanced analytics.

Password Manager Pro (On-premises | MSP)

Privileged password management

Eliminate password fatigue with secure, centralized vaulting of privileged passwords. Prevent privilege abuse by enabling selective password sharing and granular access controls based on user roles and requirements.

Access Manager Plus (On-premises)

Secure remote access and privileged session management

Regulate privileged access to remote enterprise systems via encrypted gateways from a unified console. Achieve total visibility into all kinds of privileged access with extensive session shadowing and auditing capabilities.

ManageEngine products

Key Manager Plus (On-premises)

SSH key and SSL/TLS certificate management

Gain complete visibility and control over your crypto-key environments. Prevent costly service downtime and impersonation attacks via end-to-end life cycle management of SSH keys and SSL/TLS certificates.

Enterprise service management

Enterprise and IT service management

Deliver a consistent employee experience across business functions.

ServiceDesk Plus (On-premises | Cloud | MSP)

Full-stack service management for enterprises

Deliver flawless IT services with intelligent automations, standardized workflows, and enhanced self-service capabilities. Extend proven ITSM best practices to other departments like HR and facilities using native enterprise service desk capabilities.

Customer service management

Build a one-stop portal for customers with efficient account management.

SupportCenter Plus (On-premises)

Customer support with built-in billing for businesses

Manage customer accounts, tickets, and services contracts to facilitate a superior end-to-end, multi-channel customer support experience.

IT asset management

Centralize and automate the complete IT asset life cycle.

AssetExplorer (On-premises)

IT asset management with an integrated CMDB

Discover, monitor, and track assets in your IT network from a single console. Achieve high software-license-compliance rates, maximize the ROI of vendor relationships, and make informed decisions about assets throughout their IT life cycle.

Unified endpoint management and security

Endpoint management

Automate OS deployment, patching, MDM, and other asset management routines.

Desktop Central* (On-premises | Cloud | MSP)

Unified endpoint management and security

Manage modern and legacy servers, laptops, desktops, mobile devices, and browsers from a single console.

Mobile Device Manager Plus (On-premises | Cloud | MSP)

Comprehensive mobile device management

Securely manage corporate and personally owned devices running Apple OSs, Android, Windows, and Chrome OS.

Patch Manager Plus (On-premises | Cloud)

Automated multi-OS patch management

Configure automated patch deployment for Windows, macOS, and Linux endpoints, with patching support for over 900 third-party updates across more than 500 third-party applications.

Patch Connect Plus (On-premises)

Automatic patching of third-party software

Automate the distribution of third-party software updates across your business's IT network by integrating with Microsoft SCCM and Intune.

OS Deployer (On-premises)

OS imaging and deployment

Distribute Windows operating systems to computers irrespective of the device's make or model.

Remote Access Plus (On-premises | Cloud)

Enterprise remote access

Enable technicians to troubleshoot remote Windows, macOS, and Linux devices, with multi-user collaboration, file transfers, and over 12 system tools at their disposal.

RMM Central (MSP)

Unified network monitoring and endpoint management for MSPs

Automate your MSP business's IT management and discover, manage, secure, and monitor all your clients' devices from a single console.

ManageEngine
products

ManageEngine products

Endpoint security

Proactively secure all your endpoints and browsers from cyberattacks.

Vulnerability Manager Plus (On-premises)

Prioritization-focused enterprise vulnerability management

Secure your network with built-in patching that delivers comprehensive visibility, assessment, and remediation of threats and vulnerabilities.

Device Control Plus (On-premises)

Data loss prevention for peripheral devices

Control, block, and monitor USB and peripheral devices to prevent unauthorized access to your sensitive data.

Application Control Plus (On-premises)

Software discovery and endpoint privilege management

Implement sophisticated endpoint privilege management and allow or block applications based on specified rules.

Browser Security Plus (On-premises)

Browser security and management

Enforce security policies, manage add-ons, restrict access to unauthorized websites, track users' web activity, and ensure compliance with security standards.

Endpoint DLP Plus (On-premises)

Advanced data loss prevention for endpoints

Automate the discovery and classification of sensitive endpoint data and proactively eliminate insider threats by enforcing rules for secure usage and transfer.

IT operations management

Network and server performance monitoring

Manage and optimize network, server, and application performance.

OpManager Plus* (On-premises)

Unified network, server, and application management

Manage your network devices, servers, storage, and applications and optimize network performance, bandwidth, traffic, flow, firewalls,

ManageEngine products

OpManager (On-premises | MSP)

Network performance monitoring

Monitor crucial performance metrics and network availability proactively with over 2,000 built-in monitors for a wide range of network components. Get in-depth visibility for better fault management and greater control over network performance.

NetFlow Analyzer (On-premises)

Bandwidth monitoring and traffic analysis

Get holistic visibility into your network traffic and bandwidth utilization with support for popular flow technologies. Analyze traffic patterns, perform network forensics, optimize bandwidth, and secure your network with advanced security analytics.

Network Configuration Manager (On-premises)

Network change and configuration management

Take full control over your network configurations. Leverage real-time change tracking and customizable compliance policies to avoid violations. Schedule automated backups, and conduct remote network operations with configlets.

Firewall Analyzer (On-premises)

Firewall rule, configuration, and log management

Get the most out of your network security infrastructure by managing and optimizing firewall rules, monitoring configuration changes, maintaining compliance, and analyzing firewall logs.

OpUtils (On-premises)

IP address and switch port management

Scan, monitor, and secure your IT resources seamlessly. Keep an eye out for rogue devices and monitor network availability, bandwidth consumption, and more using over 30 built-in networking tools.

ManageEngine products

Application performance monitoring

Monitor, manage, and troubleshoot application performance.

Applications Manager (On-premises)

Server and application performance monitoring

Receive in-depth, code-level insights into your business-critical applications. Resolve performance issues, automate operations, and ensure end-user satisfaction with out-of-the-box support for over 150 technologies.

Site24x7* (Cloud | MSP)

Full-stack monitoring for IT admins, DevOps, and SREs

Gain complete visibility into all IT resources—from websites, APIs, and servers to networks, cloud services, and applications. Collect metrics, logs, and traces in a unified view to detect performance issues and reduce MTTR.

IT incident management

Get instant alerts for critical incidents and provide real-time status updates.

AlarmsOne (Cloud)

Centralized IT alert management

Integrate all your IT management tools with AlarmsOne to manage every IT alert from one window. Reduce alert noise, define escalations, and get notified about critical alerts through email, SMS, and phone call.

Site24x7 StatusIQ (Cloud)

Status pages for real-time status and incident communication

Transparently communicate outages and operational status. Display the status of critical components, allow users to subscribe to updates, and announce upcoming maintenance to manage downtime and build user trust.

Security information and event management

SIEM

Spot, investigate, and neutralize security threats.

Log360* (On-premises | Cloud)

Integrated SIEM with advanced threat analytics and ML-driven UEBA

Equip your SOC with deeper visibility into security events, accelerate threat detection and response, enhance your network security posture, and ensure compliance.

Log and compliance management

Gain deeper visibility into security events and ensure compliance.

EventLog Analyzer (On-premises)

Comprehensive log and IT compliance management

Get better visibility and secure your network from attacks by collecting, analyzing, correlating, and archiving log data from servers, firewalls, applications, and endpoints.

Firewall Analyzer (On-premises)

Firewall rule, configuration, and log management

Get the most out of your network security infrastructure by managing and optimizing firewall rules, monitoring configuration changes, maintaining compliance, and analyzing firewall logs.

ManageEngine products

Security auditing

Audit Active Directory, cloud platforms and files to enhance your security posture.

ADAudit Plus (On-premises)

Real-time Active Directory, file, and Windows server change auditing

Maintain network security and compliance by tracking critical GPO changes, monitoring user logins, analyzing account lockouts, spotting malicious insiders, and more.

SharePoint Manager Plus (On-premises)

SharePoint reporting and auditing

Secure your SharePoint environment, be it on-premises or in Microsoft 365, by auditing changes to critical permissions and groups, and view usage analytics.

M365 Security Plus

Microsoft 365 security (On-premises)

Detect cyberattacks and analyze security risks in your cloud infrastructure. Fortify Exchange Online, Azure Active Directory, Skype for Business, OneDrive, SharePoint Online, Microsoft Teams, and other Microsoft 365 services.

Cloud Security Plus (On-premises)

Cloud security monitoring and analytics

Spot and neutralize threats across AWS, Azure, GCP, and other IaaS, SaaS, and PaaS solutions. Audit user access to cloud data and resources to stop unauthorized sharing of sensitive data and abuse of critical cloud devices.

DataSecurity Plus (On-premises)

File auditing, data leak prevention, and data risk assessment

Audit file changes, analyze file storage and security, discover and classify sensitive data, monitor web traffic, and prevent data leaks.

FileAnalysis (On-premises)

File security and storage analysis

Gain deep insights into enterprise file storage and security, optimize disk usage by managing junk files, and identify security vulnerabilities by assessing file permissions.

ManageEngine products

Advanced IT analytics

IT analytics

Connect to your IT applications and visualize all facets of your IT.

Analytics Plus (On-premises)

AI-enabled IT analytics for enterprises

Get a unified view of all your IT applications in one console. Blend data from several IT applications or databases, and look into the impact of incidents on ticket volume, of project delays on costs, and more.

Site24x7 CloudSpend (Cloud)

Cloud cost management for modern software teams

Make informed decisions with a full set of cloud cost management capabilities. Understand spending at a high level, identify cost-accruing services, attribute spending to business units, set up budgets, and more.

www.zoho.com

Zoho's craft and passion is software. Zoho creates beautiful software to solve business problems. Over the past decade, the Zoho suite has emerged as a leader on the cloud and on people's devices. As much as Zoho loves software, its most valuable assets are its culture and people. At Zoho, people spend years mastering their craft. In an industry where technology changes at a relentless and dizzying pace, Zoho values persistence and endurance as highly as adaptability. Zoho is committed to spending customers' money wisely. It invests more in product development and customer support than in sales and marketing. By keeping its cost of attracting customers low, Zoho keeps its prices affordable.

Zoho views itself as an integrated whole; not as a group of organizational silos that barely talk to each other, or worse, work at cross purposes. That philosophy and worldview is reflected in its product suite. The Zoho suite is as broad as it is deep. Zoho views the suite as an integrated whole, far greater than the sum of its parts.

The Zoho suite wasn't built in a day; it has taken the better part of a decade to come this far. Unlike its competitors, who periodically wake up and discover gaping product holes they have to fill urgently with acquisitions, Zoho crafts software with patience and passion. Its strategy is born of the realization that most acquisitions fail in this industry, and the customer is the one who pays the price. Zoho has made a commitment to offer real depth along with breadth in its offerings.

Market Served

Zoho is the operating system for business—a single cloud platform with all the necessary applications to run a business entirely from the cloud. Businesses can acquire and manage customers using Zoho’s marketing, sales and customer support applications—Campaigns, CRM and Desk—and can then empower employees to create, store and distribute content on the cloud with Zoho’s productivity and collaboration applications—Office, Mail and Docs. Additionally, businesses can run their own operations on Zoho’s finance and human resources applications—Books, People and Recruit.

More than **75 millions users** around the world, across hundreds of thousands of companies, rely on Zoho every day to run their businesses—including Zoho itself. A business can choose to run the entire Zoho suite or just a single application. Zoho applications are available directly through zoho.com, or through an ecosystem of hundreds of worldwide Zoho partners.

www.qntrl.com

You can book a taxi, or order a book, an expensive computer—and these days even a car!—on the internet. Fulfilling your order involves multiple people touching it—several companies and systems, perhaps an out-of-state warehouse, or even international customs. However, you'll get what you ordered, and you won't have to talk to anyone or follow up by email.

Back in your office, it's different, though. Even for the most routine things, like a simple purchase, a vacation request, or opening a hiring position, you suffer through inefficiencies, a lack of transparency, and a lot of back-and-forth over email, chat, and phone.

Why?

This is the same question we asked ourselves.

And that's why we created Qntrl.

When we started using Qntrl's technology for some of our own processes, we noticed how we were able to get visibility about everything that was going on, better control of the steps in every process, including identifying and eliminating bottlenecks, and we were able to better automate the more repetitive aspects of our operation.

Now, we'd love to also help you conquer your chaos and be in control.

We set out to provide an easy way for department heads and managers to get visibility, control, and the ability to easily automate the processes in their care—freeing them up to focus on the most important things, and achieve more as a result.

Democratizing Business Process Software

Workflow software is famous for being hard to use, hard to deploy, and expensive. At Qntrl, we work hard every day to change this. We visualize a world where every company, and every individual within those companies, has access to our software. We call this the democratization of business process software.

Qntrl is easy to use, powerful and extensible. Every organization can customize our software, and make it work for their unique circumstances. Price is also part of the equation. While high cost of ownership has always been the modus operandi of enterprise-focused software, we refuse to follow that path. High costs slow down adoption of software, and we're here to help as many people as possible.

Customer-focussed and customer-friendly

Most software companies rely on their sales team to drive their revenue. We're different. We rely on the strength of our engineering and the creativity of our product teams to create value for our customers. Engineering creates value for the customer. Sales captures value from the customer. We prefer to create value, and that's the long-term attitude we take for our business.

Having good software isn't enough if people can't trust you. Which is why we've publicly committed to not just being customer-focused, but also customer-friendly. We will always do what's in the best interest of our customers.

Market Served

If you're in charge of a process, department, or organization—and you're looking to have more visibility into what's going on in your area, you want unprecedented control over what does and doesn't happen, and you want to simplify your daily work life through automation—Qntrl is for you.

Built for medium and enterprise businesses in any industry, Qntrl helps you orchestrate workflows across departments like HR, Marketing, Finance, IT, and Legal.

www.trainercentral.com

It is an all-in-one training platform built to help you run a successful training business. With TrainerCentral, you can quickly set up your business, create and sell online courses, and nurture a dedicated community of learners across the globe. It is among the very few platforms that come with all formats of training delivery already built-in. The platform offers numerous options to create courses that perfectly reflect your knowledge and skills. You can set up lessons in multiple formats to make learning more interactive and run tests and quizzes to evaluate and quantify the learning outcome.

Trainer Central has all the right tools to power your training profession. From an intuitive website builder to customizable branding and payment management, you have a supportive business partner in TrainerCentral. It also provides a comprehensive dashboard which offers detailed analytics on subscription trends, learner progress, and course feedback, giving you full control of your business.

Market Served

Whether you're a home-based teacher, a leadership coach, a make-up artist, or a yoga guru, TrainerCentral empowers you to take your talent far and wide, build a dedicated community, and turn your passion into a rewarding profession.
