

# Secure remote access for privileged sessions

*Manage remote access to critical business systems, boost privileged session security, and eliminate inefficient workflows.*

**Remote access  
management**

**Audits and regulatory  
compliance**

**Privileged session  
monitoring**

An enterprise-ready solution for security administrators to enable direct, granular access to critical systems spanning the entire infrastructure, and manage privileged sessions with real-time auditing controls.

## **Business Benefits**

- Increased productivity
- Reduced attack surface
- Improved and easy administration
- Enhanced regulatory compliance
- Tighter access governance

## Maximize visibility, improve security, and reduce remote access risks

- **Authenticate** users into your network via solid authentication services.
- **Allow** users and contractors granular access to remote systems.
- **Connect** to critical remote systems through secure, encrypted pathways.
- **Monitor** privileged sessions in real time through session collaboration.
- **Record** every privileged session for post session review.
- **Terminate** anomalous sessions instantly to prevent misuse.

## Key features

### Remote access management

- Direct RDP, SSH, SQL, and VNC connections
- Session-specific configurations
- Data center remote access
- RemoteApp support for Windows

### Privileged session security

- Session recording and playback
- Real-time monitoring
- Session collaboration and termination
- Bidirectional remote file transfer

### User authentication and management

- AD/LDAP/Azure AD integration
- Two-factor authentication
- User role customization
- SAML SSO support

### Secure and enterprise-ready

- Military-grade AES-256 encryption
- Granular access controls
- Extensive auditing and regulatory compliance
- Database backup
