

ADManager Plus

A **powerful tool** for Active Directory management and automation

Business challenges

- Overwhelmed by manual AD tasks?
- Experiencing difficulties in managing group memberships and access permissions?
- Struggling to keep GPOs updated and consistent?
- Struggling to manage and understand permission inheritance in complex folder structures?
- Having trouble performing bulk operations, like creating user accounts in bulk or resetting passwords of multiple users?
- Finding it challenging to automate the provisioning of new users in Microsoft 365 and deprovisioning of inactive accounts in a hybrid setup?

Drawbacks of native tools

Reliance on PowerShell

Demands advanced scripting skills

Poor UI

Complicated user interface

Complex management

Overly intricate and time-intensive

Security challenges

No predefined, role-based administrative delegation options to non-IT users like managers, HR personnel, and service desk technicians

AD management simplified

Overcoming native tool complexities

ADManager Plus enables administrators to seamlessly manage AD users, computers, contacts, and groups with ease.

Capabilities of **ADManager Plus** →

Streamlined user life cycle management

Customizable templates for bulk provisioning and re-provisioning

Bulk user management

OU management

File server management

GPO management

AD migration

Microsoft 365 user management

CAPABILITIES

Streamlined user life cycle management

Provision user accounts across multiple platforms, such as AD, Microsoft Exchange, Microsoft 365, and Google Workspace, simultaneously from a single console.

User data import

Efficiently import user data

User onboarding

Streamline new user account creation

Assign roles and permissions

Efficiently import user data

Ongoing user management

Maintain and update user info

Reporting and monitoring

Generate reports and track user activities

User account updates

Handle role changes and promotions

User offboarding

Efficiently manage user exits

Account deactivation and deletion

Efficiently import user data

CAPABILITIES

Customizable templates

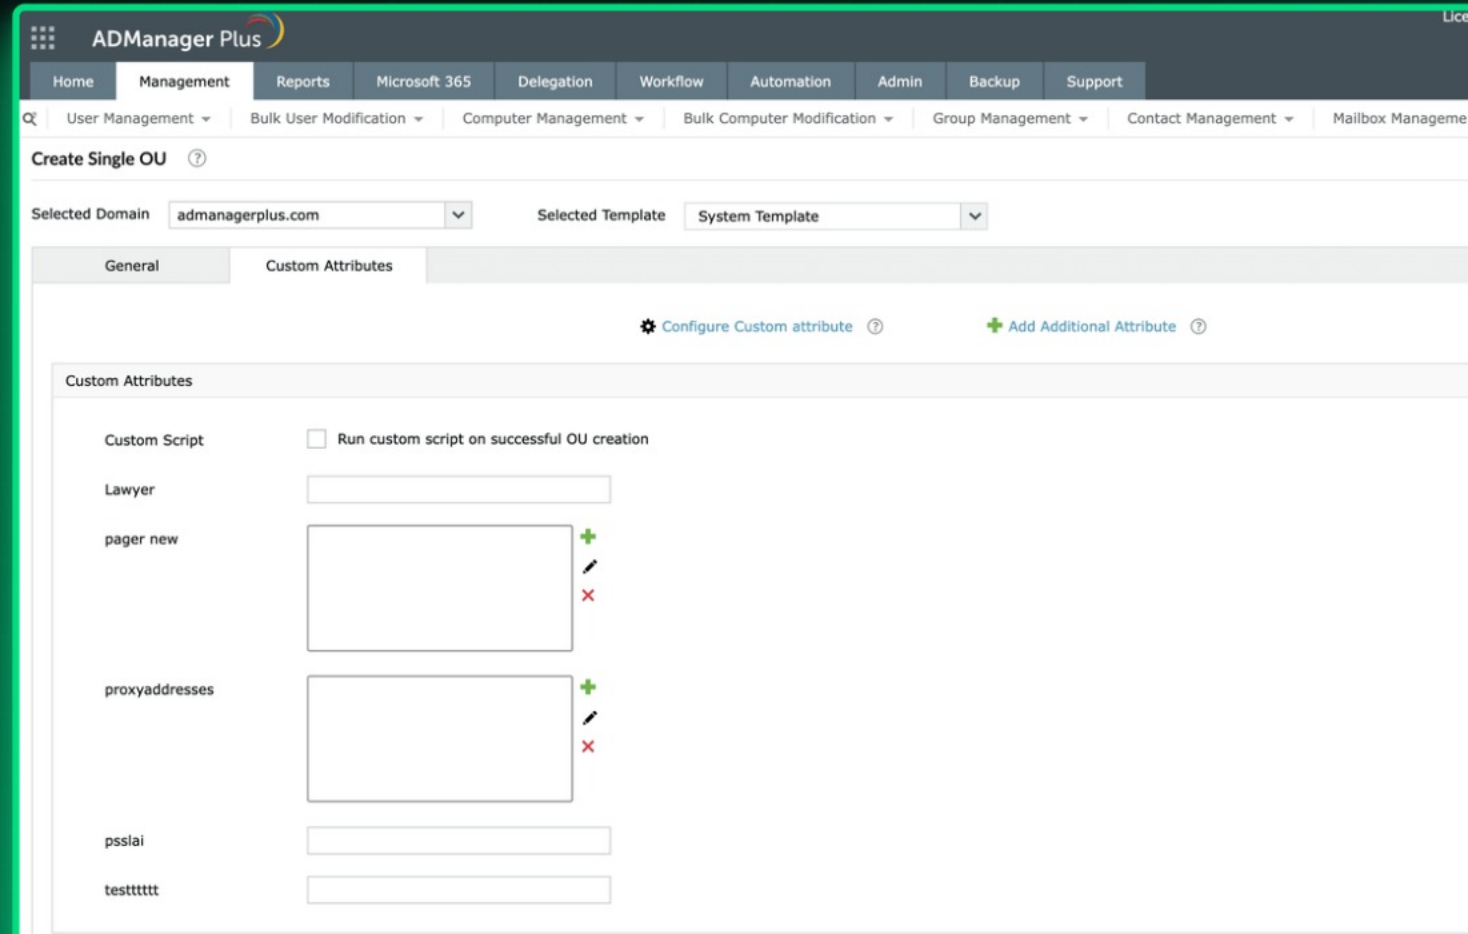

- Streamline AD management with customizable templates for users, groups, OUs, and GPOs
- Simplify account creation by pre-filling standard attributes and auto-populating fields using Creation Rules
- Assign templates to help desk technicians, manage duplicates, and auto-configure attributes
- Simplify bulk operations like password resets, account creation, and managing inactive accounts via CSV import

The screenshot displays the ADManager Plus web interface for configuring a user creation template. The top navigation bar includes 'Home', 'Management', 'Reports', 'Microsoft 365', 'Delegation', 'Workflow', 'Automation', 'Admin', 'Backup', and 'Support'. Below this, a secondary navigation bar lists various management tasks like 'User Management', 'Bulk User Modification', etc. The main content area is titled 'User Creation Templates' and shows a form for a template named 'User Creation with basic Attributes' for the domain 'admanagerplus.com'. The 'General' tab is active, showing fields for 'First name', 'Initials', 'Last name', 'Logon Name' (set to 'FirstL+LastN'), 'Logon name(pre-Windows 2000)', 'Full name', and 'Select Container' (set to 'CN=Users,DC=admanagerplus,DC=...').

CAPABILITIES

OU management

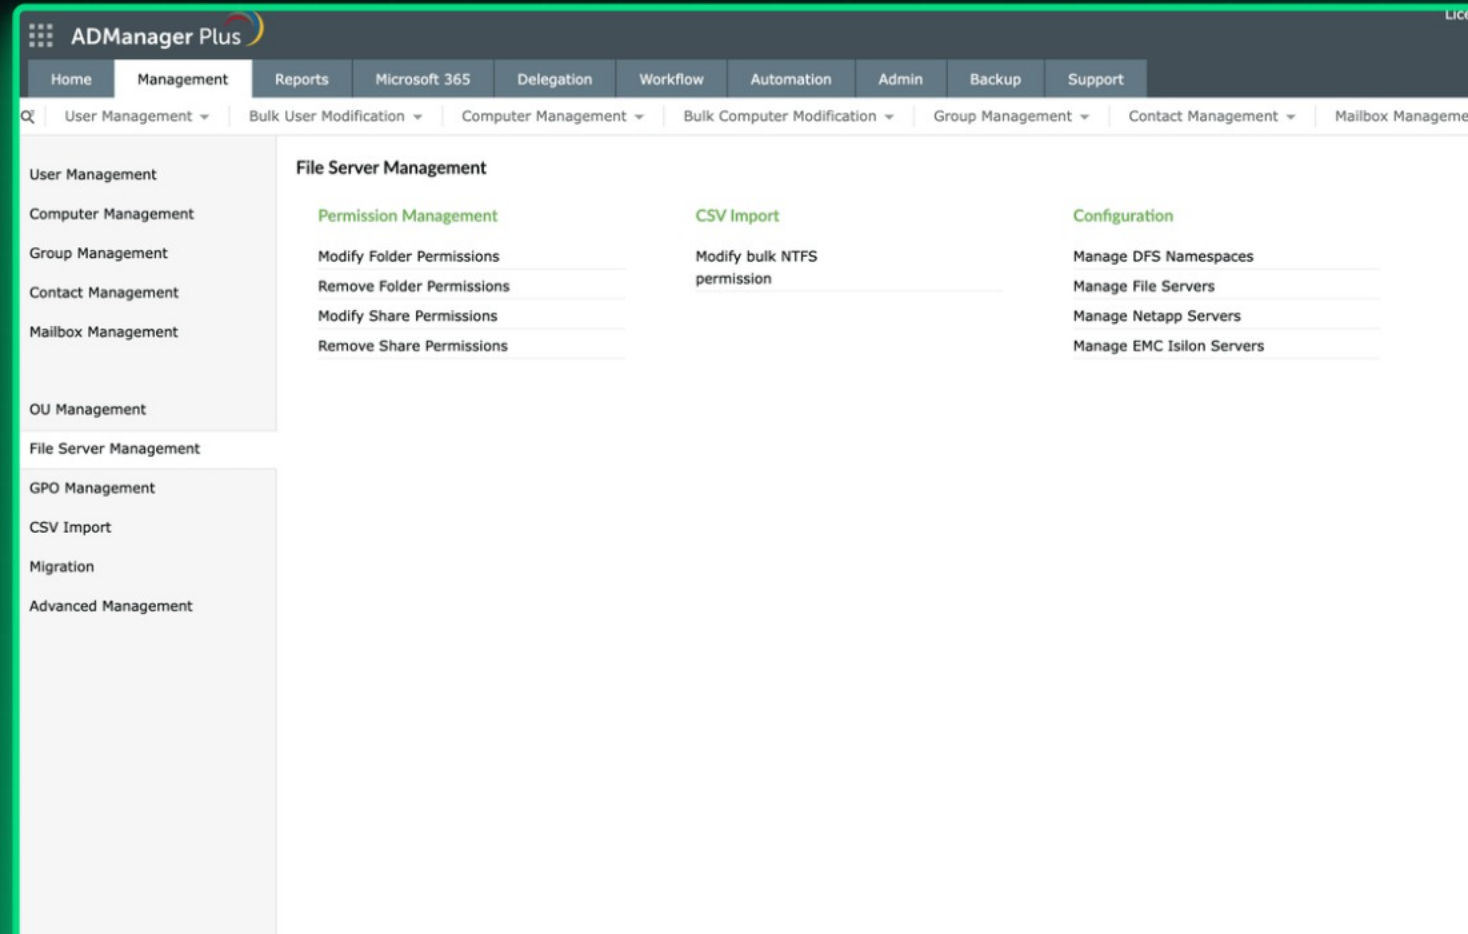

- Create, modify, move, and delete OUs effortlessly to ensure efficient AD administration
- Standardize OU creation with templates and manage multiple OUs simultaneously using the import CSV option
- Perform all OU management tasks from a single, user-friendly console

CAPABILITIES

File server management

- Manage NTFS and share permissions in bulk, ensure secure resource access, and perform bulk modifications
- Manage permissions on AD, NetApp, and Isilon file servers from a single, central interface
- Apply various permissions and limit scope to specific folders and sub-folders

CAPABILITIES

GPO management

- Enable administrators to manage GPOs and their links effortlessly, facilitating key actions such as syncing administrative file templates, linking GPOs, and forcing updates to skip wait times.

The screenshot shows the ADManager Plus web interface. The top navigation bar includes 'Home', 'Management', 'Reports', 'Microsoft 365', 'Delegation', 'Workflow', 'Automation', 'Admin', 'Backup', and 'Support'. Below this, a secondary navigation bar lists various management tasks like 'User Management', 'Bulk User Modification', 'Computer Management', etc. The main content area is titled 'GPO Management' and features a 'Select Domain' dropdown menu set to 'admanagerplus.com'. A search bar with a 'Manage' dropdown is present. Below the search bar is a table with columns for 'Actions', 'Display Name', 'User Configuration Settings', and 'Computer Con'. Two rows are visible in the table, both showing 'Default Domain Policy' and 'Default Domain Controllers Policy' with 'Enabled' status and toggle switches.

Actions	Display Name	User Configuration Settings	Computer Con
<input type="checkbox"/>	Default Domain Controllers Policy	Enabled <input checked="" type="checkbox"/>	Enabled <input checked="" type="checkbox"/>
<input type="checkbox"/>	Default Domain Policy	Enabled <input checked="" type="checkbox"/>	Enabled <input checked="" type="checkbox"/>

CAPABILITIES

Migration

- Simplify AD migrations with ADManager Plus. Easily migrate users, groups, contacts, and GPOs across trusted forests in your AD environment, with or without the Active Directory Migration Tool (ADMT).

The screenshot displays the ADManager Plus User Migration configuration page. The interface includes a top navigation bar with tabs for Home, Management, Reports, Microsoft 365, Delegation, Workflow, Automation, Admin, Backup, and Support. Below this is a search bar and a secondary navigation bar with various management options like User Management, Bulk User Modification, Computer Management, etc. The main content area is titled 'User Migration' and is divided into three sections: Source Settings, Target Settings, and Migration Settings. Source Settings includes fields for Source Domain (admanagerplus.com) and Select User(s) to be Migrated. Target Settings includes fields for Target Domain (No forest domain configured) and Target OU (Select OUs). Migration Settings includes radio buttons for OU Option (Migrate objects directly to the selected Target OU as a flat list), Conflict Handling (Do not migrate if conflict is detected), Domain Suffix of UPNs, Password Handling (Copy Password), and a checkbox for Migrate using ADMT. A 'More Options' link is visible at the bottom of the Migration Settings section.

CAPABILITIES

Delete and disable policy

- Define domain-specific policies for user accounts in AD to automate actions such as deleting or disabling home folders, roaming profiles, Microsoft 365 and Google Workspace accounts, and more.

The screenshot displays the ADManager Plus web interface. The top navigation bar includes 'Home', 'Management', 'Reports', 'Microsoft 365', 'Delegation', 'Workflow', 'Automation', 'Admin', 'Backup', and 'Support'. The left sidebar lists various settings categories: Custom Settings (Naming Formats, Organization Attributes, Password Policy, LDAP Attributes, Delete/Disable Policy), System Settings (Google Workspace, Notification Profile, Integrations), Enterprise Essentials (Load Balancer, High Availability), General Settings, and Employee Preferences. The main content area is titled 'Delete/Disable Policy' and includes a sub-header 'Define the disable and delete policies for your organization. [Learn more...](#)'. Below this, there is a 'Select Domain' dropdown menu set to 'admanagerplus.com'. The page is divided into two tabs: 'Delete Policy' and 'Disable Policy'. Under 'Delete Policy', there are sections for 'Home Folders', 'Profiles', 'On-premises Mailbox', and 'Cloud Accounts'. The 'Home Folders' section has three options: 'Delete/Move Home Folders' (checked), 'Delete Remote Home Folders' (selected with a radio button), and 'Move Remote Home Folders' (unselected with a text input field). The 'Profiles' section has two options: 'Delete Roaming Profiles' and 'Delete Roaming Terminal Service Profiles'. The 'On-premises Mailbox' section has two options: 'Delete User Mailbox permanently' and 'Export User Mailbox'. The 'Cloud Accounts' section has two options: 'Delete Microsoft 365 Account' (checked) and 'Delete Google Workspace User Account'. There is also a 'Custom Script' section with an option 'Run Custom Script'.

CAPABILITIES

Real-time notifications

- Configure ADManager Plus to notify administrators or technicians of any AD changes via SMS or email
- Create notification templates and profiles for custom messages and recipient configurations

The screenshot shows the ADManager Plus interface for configuring a notification profile. The left sidebar contains a navigation menu with categories like Custom Settings, System Settings, and Enterprise Essentials. The main content area is titled 'Notification Profile' and includes the following fields:

- Profile Name:** User Password Reset Notification
- Description:** Notify User when their account Password is Reset
- Profile Criteria:** A list containing one criterion: 1. Action Is User must change pa. (Criteria : (1))
- Notification Template:** User Password Reset Notification

At the bottom of the form, there are 'Save' and 'Cancel' buttons.

Montmorency's user admin ally

Business challenge

- College Montmorency enrolls 6,000+ new students annually, making AD user creation resource-intensive
- Most user attributes are consistent, but transferring data from CSV to AD accurately is challenging
- Efficient management can significantly reduce time and resource use

ADManager Plus for College Montmorency

- Predefined templates simplify setting up user attributes
- CSV bulk-user import for easy data transfer
- All-in-one tool for AD management and user administration
- Intuitive interface with detailed, easy-to-understand reports

I have to recreate more than **6,000 users yearly.**

ADManager Plus help create these in less than a few hours. I have much more time left for other tasks, and errors occur less often since the template lets you configure your users.

—Cuauhtemoc Gagnon,
IT infrastructure technician, College
Montmorency

BENEFITS

of using ADManager Plus for AD management

Cost-effective

Saves cost by streamlining AD management processes, reducing the need for manual intervention, and minimizing downtime

Scalability

Scales easily to accommodate growing organizational needs, ensuring that AD management remains efficient and effective as the organization expands

User satisfaction

Increases user satisfaction by providing a seamless experience for managing user accounts
