ADManager Plus

Streamline identity management using **ADManager Plus' application integrations**

Outline

- ADManager Plus: Your go-to hybrid AD IGA tool
- ADManager Plus' application integrations
- List of applications
- How application integrations work in ADManager Plus
- How ADManager Plus integrates with custom applications
- How ADManager Plus helped ImmunoTek
- Benefits of ADManager Plus' application integrations

ADManager Plus:
Your go-to hybrid AD IGA tool

- ADManager Plus is an **identity governance and administration** (IGA) tool built to securely manage and govern the identities in Active Directory (AD), Microsoft 365, Exchange, and Google Workspace environments

- With capabilities like **management, reporting, risk assessment, access certification, event-driven automation,** and more, ADManager Plus simplifies IGA for enterprises

- ADManager Plus can be i**ntegrated with enterprise applications** to manage identities synergistically

- ADManager Plus can also easily **connect with custom third-party applications** for management functions

How **ADManager Plus** helped **ImmunoTek**

Business challenge

The IT team at ImmunoTek was dependent on conventional AD methods to provision user accounts. They were also behind on receiving notifications from HR for new employees, role changes, and terminations.

Solution

ImmunoTek chose ADManager Plus to address this business challenge. By integrating the company's HCM solution with ADManager Plus, the IT team was able to automatically create corresponding new user accounts in AD as soon as they were added to the HCM solution, instantly modify and delete users, and also notify the stakeholders involved.

How **ADManager Plus** helped **ImmunoTek**

This is how ImmunoTek has benefitted:

Real-time notification

Stakeholders are notified instantly about a techncian's task status, automation status, and more as and when a task is executed

Improved productivity

ImmunoTek's IT team no longer provisions and deprovisions users manually and has automated the entire process, resulting in improved business efficiency

Automated user management

Integrating with its HCM application, ImmunoTek has now cut down the HR waiting period and automated the user life cycle management process

Benefits of **integrating** **ADManager Plus** with **enterprise applications**

Integrating ADManager Plus with external applications enables:

Custom application support

Integrate with any application that supports REST, SOAP, or GRAPH APIs through flexible webhook configuration

Automated identity life cycle management

Allows automatic provisioning and deprovisioning of users as and when they are updated in the integrated applications

Bi-directional sync

Allows automatic provisioning and deprovisioning of users as and when they are updated in the integrated applications

Centralized identity management

Provides a unified view into identities and helps manage them efficiently

Enhanced productivity

Accelerates IT teams' productivity by reducing the time to switch between applications

Minimized data entry errors

Reduces manual data entry errors by automating management processes

ManageEngine
ADManager Plus

Custom application integration

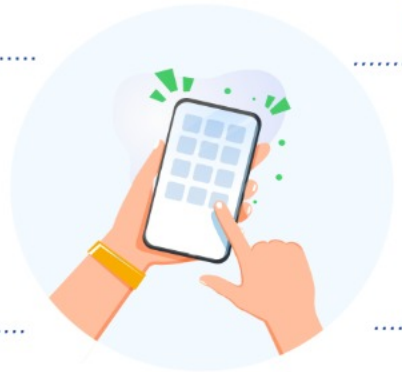
ADManager Plus now supports comprehensive custom application integration beyond prebuilt connectors

Seamless integration via standard APIs

Integrate with any application that supports REST, SOAP, or GRAPH APIs

Two-way, real-time data sync

Enable real-time, two-way data exchange between your custom applications and systems like Active Directory and Microsoft 365, keeping everything up to date across platforms



Flexible configuration

Configure custom endpoints, headers, parameters, and authentication methods

Custom authentication

Support for various authentication methods, including OAuth, API keys, and basic authentication
