

Upgrade Guide

For Customers Using Applications Manager Build No. 11040 to 14911

Step 1 - Download Service Pack

- Download [Service Pack 15005](#) and [Service Pack 15224](#) and place it inside a folder in the machine where Applications Manager is installed.

Step 2 - Shut down Applications Manager

- Shut down Applications Manager.
- Via command prompt, execute the **shutdownApplicationsManager.bat -force** command (**shutdownApplicationsManager.sh -force** for Linux) from the '*Applications Manager Home*' folder.

Step 3 - Backup Applications Manager

- As a good practice, we recommend you to take a complete backup of 'Applications Manager Home' folder.
- SQL backend users should connect to the SQL Management Studio & take a backup of the AMDB database in addition to the Applications Manager directory backup. [Click here](#) to know how to take the SQL database backup.
- To roll-back to the old version, rename the existing 'Applications Manager Home' directory and restore the complete backup copy of this directory in the same location.
- SQL backend users should restore the complete backup copy of the AMDB database as well using the SQL Management Studio. [Click here](#) to know how to restore the SQL database backup.

Step 4 - Upgrade Process

- Run the **updateManager.bat** script (**updateManager.sh -c** for Linux) under the '*Applications Manager Home/bin*' folder which invokes the Update Manager tool.
- Browse and select the Service pack file (.ppm) for 15005 saved in your computer.
- Click **Install** to initiate the upgrade process for 15005.
- After the upgrade process for 15005 is over, restart the Applications Manager service and access the GUI. Once this is done, shut down the Applications Manager service.
- Now, browse and select the Service pack file (.ppm) for 15224 saved in your computer.
- Click **Install** to initiate the upgrade process for 15224.
- Once you see the "Installed" message on your screen, click **Finish** to complete the installation.
- Now start the Applications Manager service.

Note:

- Start command prompt as an administrator [cmd -> right click --> run as administrator] [Click here](#) to see the screenshot.
- < Applications Manager Home > refers to the directory in which you have installed the Applications Manager product. This directory location is specified by you when you install the product.
- After installing a Service Pack (.ppm) file, it is highly recommended to restart the Applications Manager service, access the GUI, and then shut down the service each time before proceeding to install the next Service Pack (.ppm) file.
- For Enterprise edition setup, follow the same steps in all the Applications Manager instances (you must upgrade the Admin node first, followed by Managed nodes).
