

Bandwidth consumption analysis between Manual and Desktop Central for MS critical patches:

Assumption:

- Patch size of 8MB (average).
- Ten patches per system (Data based on the 2012 first quarter).

Manual Procedure	Desktop Central
For one system: 8MB*10 patches=80 MB	Once, the patch is downloaded in the server (i.e. 80MB file).
For 100 systems: 100*80MB=8GB	It can be deployed any number of times, without any additional consumption of internet bandwidth. <u>Result:</u> Save bandwidth cost up to 100 times.

Additional Benefits with Desktop Central

- Plan and implement power management to desktop power consumption and money.
 - Get comprehensive reports to meet your audit requirements anytime.
 - Get a complete insight into your Active Directory infrastructure components.
 - Schedule running system tools like disk defrag, check disk etc., to improve the system performance.
 - Get complete details about actual user logion time with history.
-
