

# A change auditing, monitoring, and reporting solution for Microsoft Exchange Server, Exchange Online, and Skype for Business Server.

## All-inclusive reporting

Get complete information about all components of your Exchange and Skype for Business environments, including mailboxes, distribution lists, and public folders.

## Inside-out monitoring

Retrieve information about the health and status of components and services in your Exchange servers. Monitor Exchange email queues, DAGs, server storage, and more.

## Real-time change auditing

Audit Exchange event logs effortlessly. Track and report on non-owner mailbox access, mailbox logon activity, changes to mailbox permissions and server configurations, etc.

*I was up, running, and collecting data from my Exchange environment within five minutes with nearly zero configuration steps! The sheer amount of reports and audits offered are staggering.*

**Andrew Jacops,**  
system administrator, 4sysops

*We were in need of granular reporting on Exchange data. With the many different types of reports supported by Exchange Reporter Plus, it is now possible to get a lot more Exchange data without having to create a bunch of PowerShell scripts.*

**Shannon Rubin, IBTS**

*We needed a reporting tool for Exchange. Exchange Reporter Plus was extremely cost-effective and easy to deploy. I am certainly getting value out of Exchange Reporter Plus' email traffic reports.*

**Ken Collins,**  
senior system engineer, Sunbelt Rentals

# Features and benefits

## Fetch mailbox insights

Gain complete control over the mailboxes in your organization by constantly tracking mailbox sizes, their growth over any period of time, mailbox-enabled users, inactive and orphaned mailboxes, and more.

## Analyze service health

Monitor the health of Exchange services in your organization and receive immediate notifications when services start or stop running.

## Track deleted or moved emails

Locate all the emails that were deleted or moved inside mailboxes in your organization, down to the names of the source and destination folders.

## Real-time alerts

Configure threshold-based alerts and receive notifications in real time when a critical change activity happens in your Exchange environment.

## Analyze email traffic

Get your Exchange organization's email traffic statistics. Study users' messaging activities, particularly when they communicate with external domains.

## Audit mailbox logons

Avoid data loss and policy violations by tracking non-owner access to mailboxes in your organization.

## Analyze Skype activities

View details about conferences, IM sessions, audio and video calls, and the summary of file transfers happening in your Skype for Business environment.

## Custom reports

Create your own Exchange reports, including auditing and monitoring reports, and run them for specific mailboxes in your organization.

## Other key features

- Mailbox and public folder content tracking
- OWA and ActiveSync reporting
- Server CPU and memory utilization monitoring
- Exclusive compliance reports for SOX, HIPAA, PCI, and GLBA
- Real-time DAG health monitoring
