

# An identity security solution **with adaptive MFA, SSO, and password management capabilities**

Empower  
end users.

Improve  
security.

Reduce  
costs.

# Benefits of ADSelfService Plus

## Enhanced security

Improves security across the enterprise by securing identities and access to resources.

## One identity

Synchronizes user identities and provides a unified portal for application access that is protected by advanced authentication

## Immediate ROI

Provides immediate return on investment by eliminating password-related tickets and calls to the help desk.

## Improved productivity

Improves on-premises and remote employee productivity by helping users regain access to their systems immediately without relying on the help desk.

# Highlights of ADSelfService Plus

## Adaptive MFA

- ✓ Secure enterprise endpoints and user identities with MFA for local and remote access to machines (Windows, macOS, and Linux), VPNs, OWA, and enterprise applications.
- ✓ Implement conditional access to automatically alter authentication decisions based on the IP address, time of access, geolocation, and device used.
- ✓ Choose from any of the 20 authenticators available, including biometrics, TOTP, and phishing-resistant authenticators such as FIDO passkeys.

## SSO and just-in-time provisioning

- ✓ Secure and streamline access to cloud applications by letting users access multiple apps with a single login.
- ✓ Get rid of credential-based attacks by allowing passwordless logins into enterprise applications.
- ✓ Secure and streamline access to cloud applications by automatically creating user accounts in integrated applications and letting users access multiple apps with a single login.

## Self-service password management and security

- ✓ Allow users to reset passwords and unlock accounts securely without the help of IT admins.
- ✓ Employ advanced, granular password policies to govern password resets and changes.
- ✓ Provide a secure web-based portal for users to change their domain and enterprise application passwords.

## Remote work enablement

- ✓ Automatically update users' cached credentials during remote password resets.
- ✓ Alert remote users of impending password and account expiration via email, SMS, and push notifications.
- ✓ Empower on-the-go users with self-service password reset and account unlock features.

## Workforce self-service

- ✓ Maintain up-to-date AD profiles by letting users self-update their profile information.
- ✓ Enable users to search for colleagues, contacts, and work groups using a filter-based employee search tool, and check their enterprise hierarchical position with an organizational chart.
- ✓ Allow users to subscribe and unsubscribe from groups without admin dependency.

“

ADSelfService Plus is a tool that we consider indispensable. It is the right tool for the job. Our password reset requests are nearly zero. This frees up IT and management as well as employees to be more productive. Any company that relies on Active Directory authentication with password expiry will benefit from using it. The price is also right.

”
