

Enterprise self-service with ADSelfService Plus

Decrease help desk workload with secure end-user self-service

IT admin, we hear you!

- Are you swamped with trivial user requests that you often don't have time for other critical IT tasks?
- Active Directory attribute updates, group membership requests, searching for employee information, and the list of trivial user requests goes on...

Did you know?

81% of all users attempt to take care of issues themselves before reaching out for help.

As an IT admin

don't you sometimes wish your users could manage some of their own tickets for a change?

Consider your wish, granted!

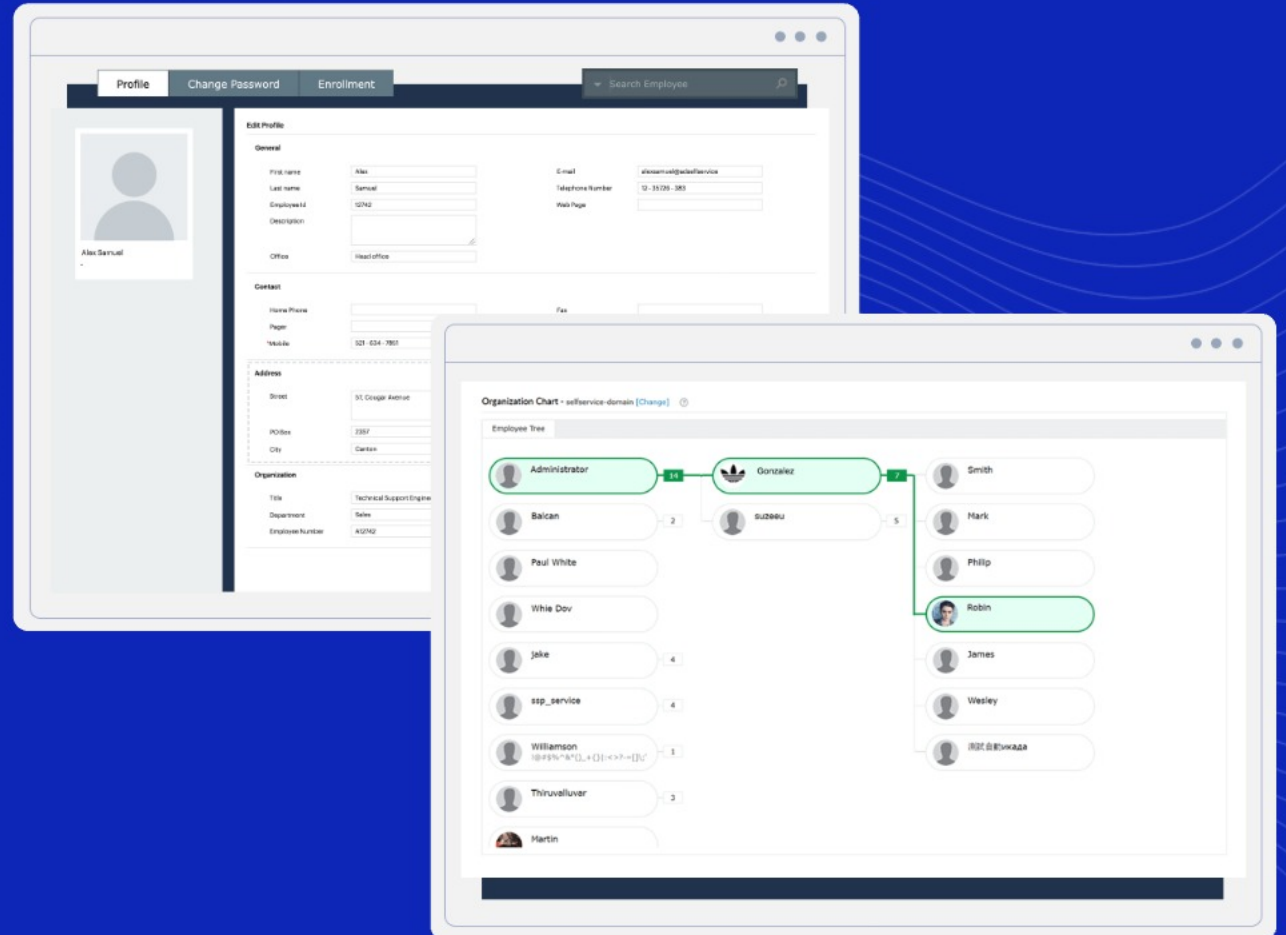

ADSelfService Plus, an identity security solution, provides **secure end user self-service** with features like self-update of AD attributes and self-service AD group subscription.

ADSelfService Plus provides approval-based self-service for your users to

- Update their Active Directory profile details
- Opt in and out of selected distribution and security groups on their own
- Search for users, contacts, and groups in your organization using advanced search filters
- View their position in the organization's hierarchy using the organization chart

You can review, approve, and set approval workflow rules for users' self-service actions, which are raised as requests instead of direct updates to AD.

Switch to **ADSelfService Plus today**

and enjoy enhanced identity security for your organization!

Guaranteed ROI

ADSelfService Plus gives you an immediate ROI by nearly eliminating password-related tickets.
