

Remote work enablement with ADSelfService Plus

Secure and streamline remote work for your enterprise

Is hybrid work your company's new normal?

Did you know?

Did you know that **20%** of IT enterprises experienced a breach due to a remote worker during the pandemic?

Remote work demands extra security!

**Both admins and users
may experience
challenges in remote work**

- In the hunt for security in remote work, user experience is often overlooked.
- There are also increased help desk requests and remote password management issues.

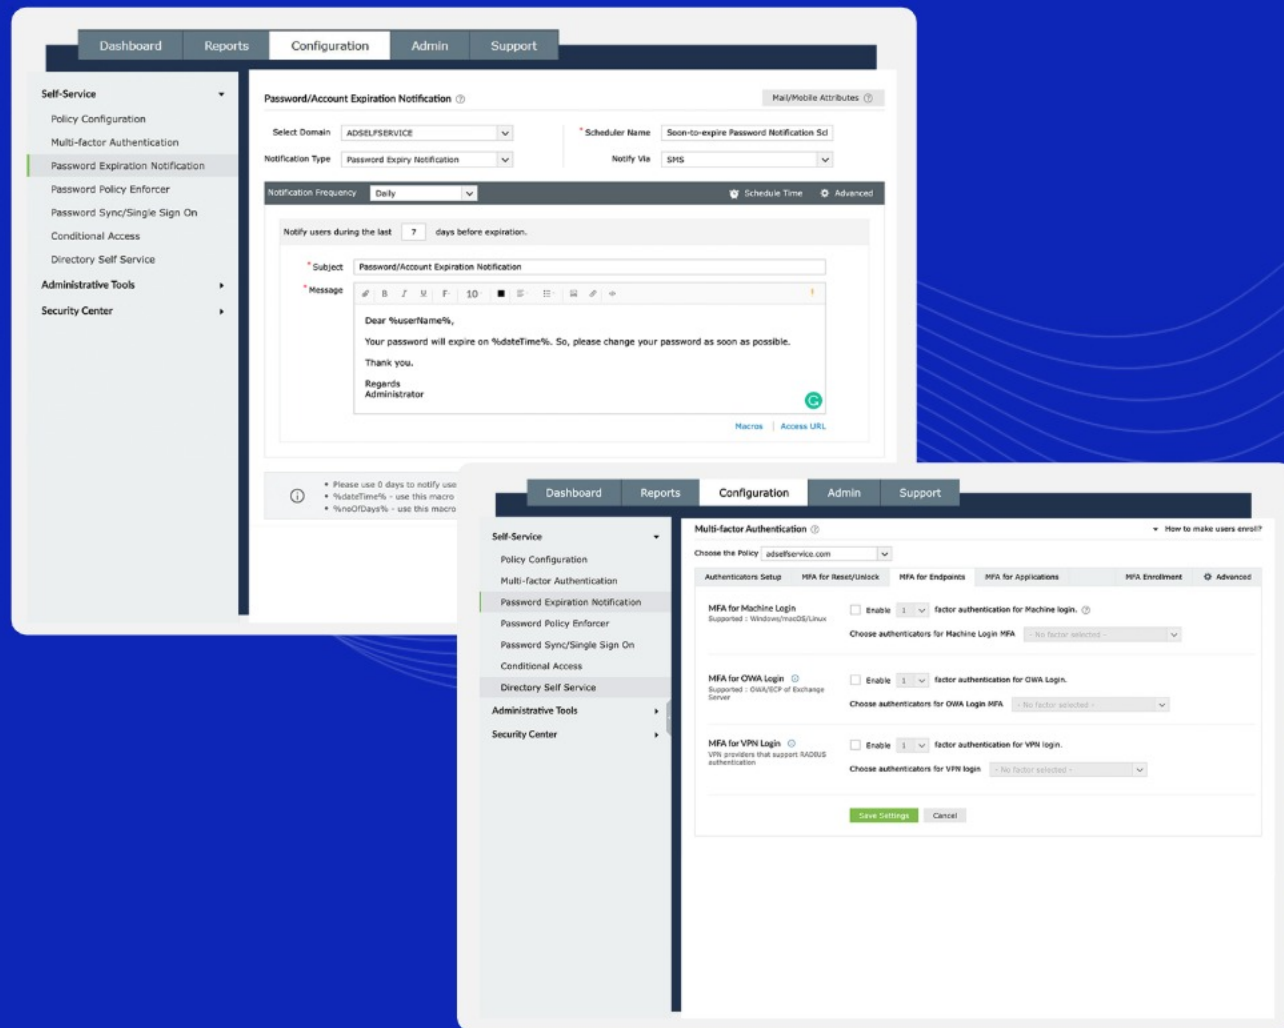

Worry no more!

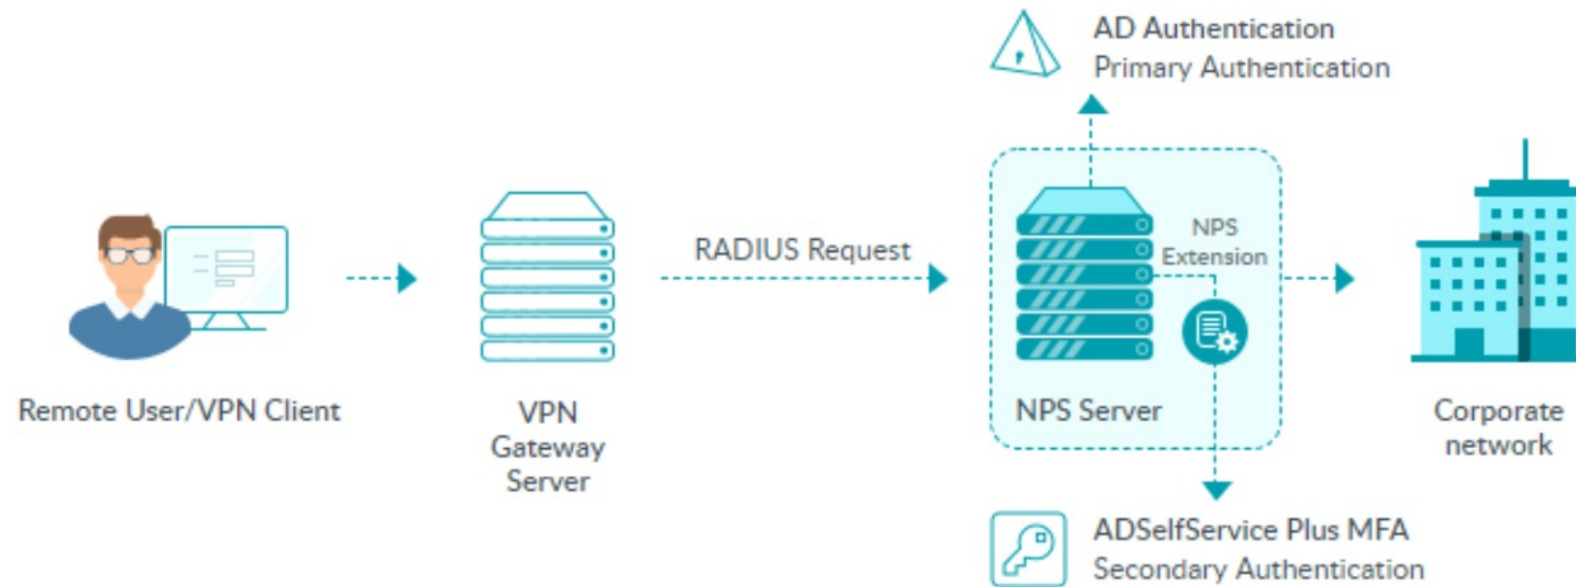

ADSelfService Plus provides efficient **remote work capabilities**—like MFA for VPN logins and mobile password management—ensuring a smooth ride for admins and end users.

ADSelfService Plus secures and eases remote work with capabilities like

- MFA for VPN, OWA, and RDP logins
- Cached credential updates
- Password expiry notifications
- Mobile password management
- Web-based password changes

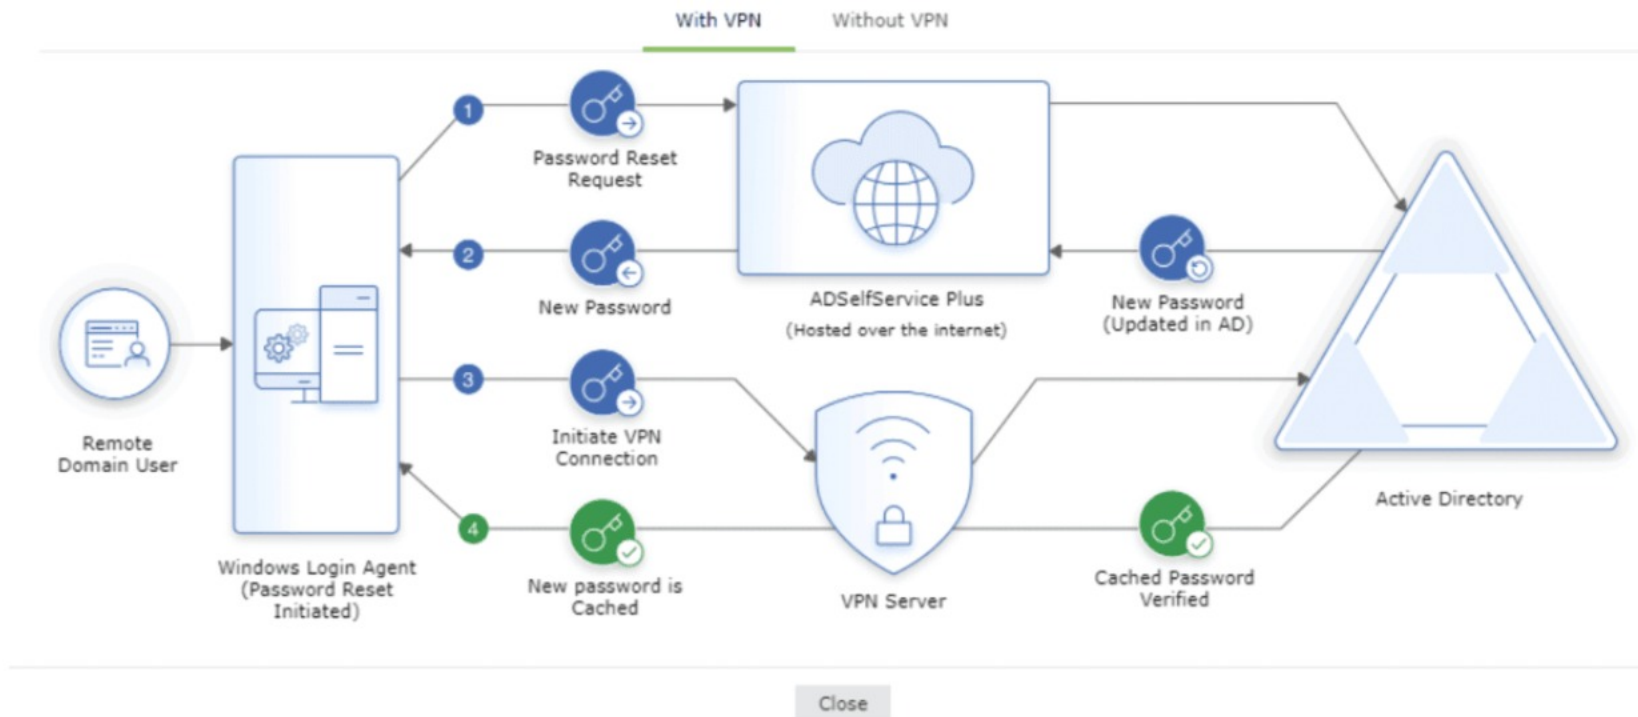

Here's how MFA for VPN logins works in ADSelfService Plus

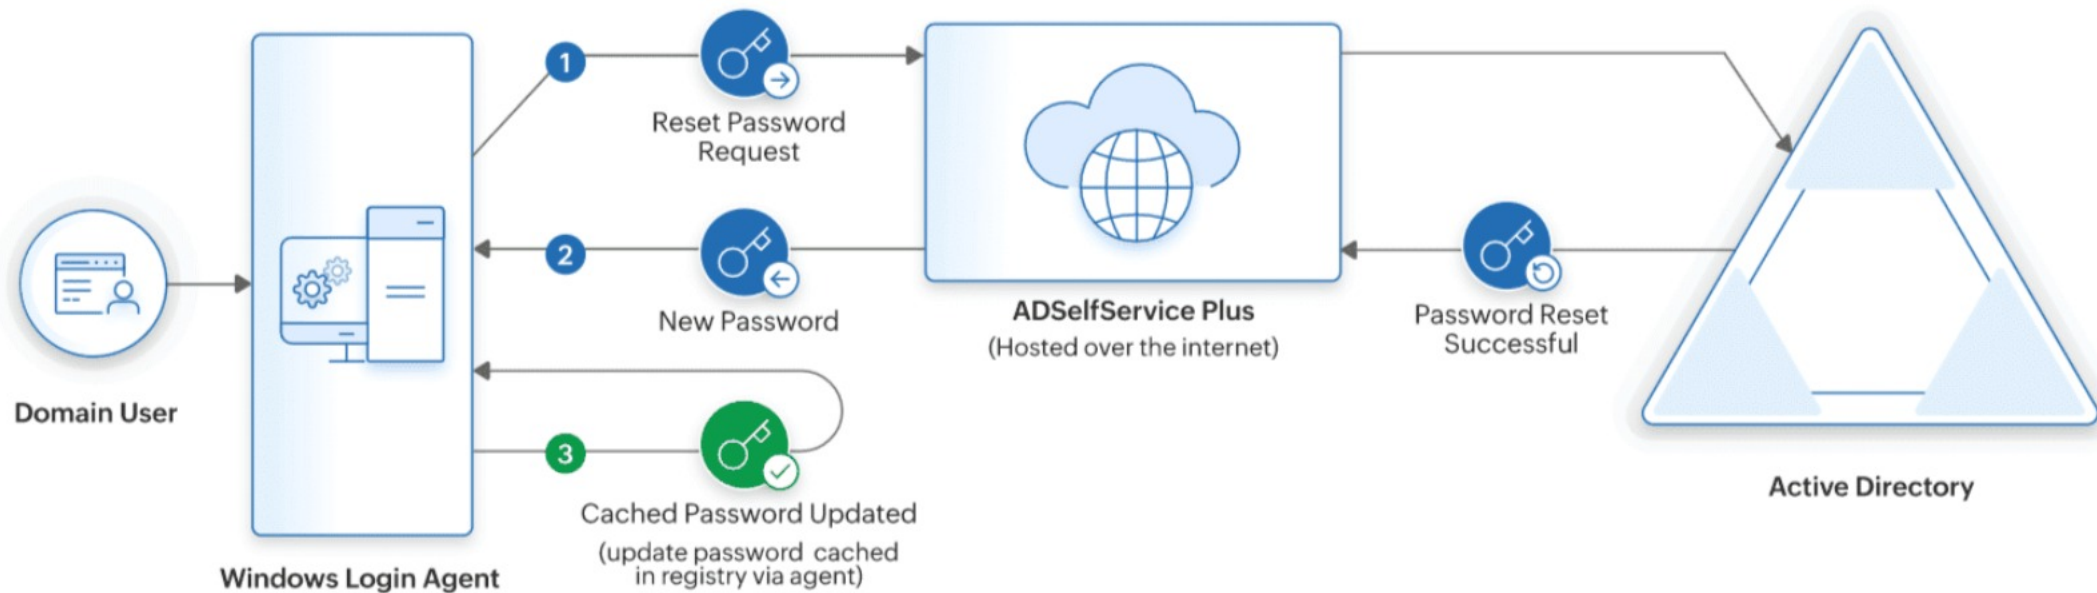

Here's how cached credential updates happen in ADSelfService Plus

Through a VPN client:

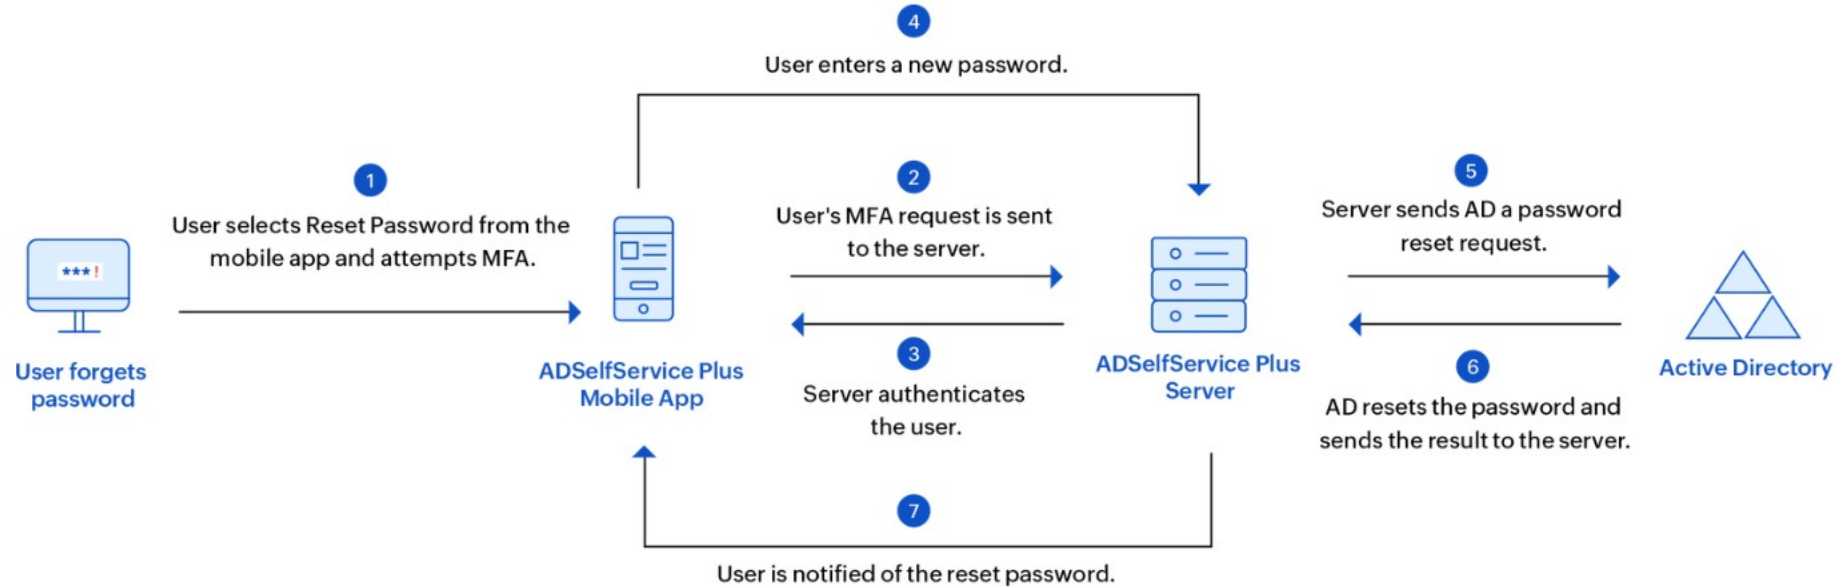

Here's how cached credential updates happen in ADSelfService Plus

Without a VPN client:

Here's how mobile password reset works in ADSelfService plus

Switch to **ADSelfService Plus today**

and **enjoy enhanced identity security for your organization!**

Guaranteed ROI

ADSelfService Plus gives you an immediate ROI by nearly eliminating password-related tickets.
