

ServiceDesk Plus Cloud Masterclass 2023

S2E1: Crafting dynamic templates in ServiceDesk Plus Cloud

ServiceDesk Plus Cloud enables you to configure scenario-based templates that pre-populate or dynamically modify information based on end-users' input. Templates ensure accuracy in capturing relevant information, simplify processes, and save time by automating repetitive processes.

You can configure templates for-

- Incidents
- Service requests
- Problems
- Changes
- Projects
- Releases
- Solutions
- Purchase orders
- Contracts
- Tasks
- Replies
- Resolutions

Functionalities

Data pre-population: You can configure templates to pre-populate necessary fields within forms used for collecting information across different processes. This functionality is available across all templates.

Layout design: Design the layout of the forms by adding, removing, or relocating fields and sections. You can design custom layouts for incident templates, service templates, problem templates, change templates, project templates, release templates, solution templates, and purchase order templates.

Customized views: Request forms can be customized based on whether a requester or a technician accesses the forms. You can configure layout-level customization as well as field-level visibility. This customization is available for incident templates and service templates.

Automations:

Form rules

Using form rules, you can perform various dynamic modifications based on form events. You can create rules to update fields, show/hide fields, enable/disable fields,

mandate fields, etc. You can configure form rules for incident templates, service templates, problem templates, change templates, and release templates.

Other automation

Depending on the template, you can automate certain repetitive processes like adding tasks, configuring approvals, configuring SLA, etc. The following is the list of processes that can be automated when configuring different templates:

Capabilities	Availability
Associating tasks	<ul style="list-style-type: none">• Incident templates• Service templates• Problem template• Change templates• Project templates• Release templates
Configuring approvals	<ul style="list-style-type: none">• Service templates
Associating SLAs	<ul style="list-style-type: none">• Service templates
Associating life cycles	<ul style="list-style-type: none">• Incident templates• Service templates• Problem templates
Associating workflows	<ul style="list-style-type: none">• Change templates• Release templates
Assigning roles	<ul style="list-style-type: none">• Change templates• Release templates
Adding members and milestones	<ul style="list-style-type: none">• Project templates
