

Log360 MSSP Factsheet

ManageEngine Log360 MSSP is a unified SIEM solution that helps MSSPs monitor, manage, and secure clients' environments from a single console. Log360 MSSP's highly scalable architecture helps reduce downtime and enables a proactive approach to security. Additionally, with core capabilities such as data isolation, incident response, and compliance management, the solution meets clients' end-to-end cybersecurity requirements. Log360 MSSP is available both **on-premises** and in the **cloud**.

System requirements

Log360 MSSP
(on-premises)

Log360 Cloud MSSP

Licensing

Log360 MSSP (on-premises) is licensed based on the number of log sources (such as domain controllers, syslog devices, Windows Server instances, and Windows Workstations). Add-ons such as UEBA, Advanced Threat Analytics, and Active Directory Reporting have to be purchased individually for the clients.

Log360 Cloud MSSP is licensed based on storage and number of clients.
