New Product Advisory: Site24x7 Goes Mobile With Free iPhone App

iPhone Users Gain Tool for Monitoring Web Infrastructure Anywhere, Anytime

- **Features push notification functionality to receive instant alerts**

- **Analyze downtime with in-depth Root Cause Analysis reports**

- **Free download available at https://www.site24x7.com/server-monitoring-iphone-app.html**

PLEASANTON, Calif.--(BUSINESS WIRE)--Site24x7, a leading website and web application monitoring service from Zoho Corp., today announced the immediate availability of the Site24x7 app for iPhone. The free app lets users connect to Site24x7 anytime, anywhere and view critical metrics such as availability status, Root Cause Analysis reports, outage reports, SLAs and much more. Users can even opt-in for instant alerts via push notification, ensuring website administrators and developers know immediately when a website or server goes down.

"Site24x7 helps companies ensure website uptime, diagnose usability problems with web pages, troubleshoot any unplanned downtime quickly with instant alerts, and track website trends with intuitive reports," said Gibu K. Mathew, director of product management at Zoho Corp. "The iPhone app frees IT pros from their desktop and laptop computers, enabling them to stay informed and take action on actual and potential issues, wherever they go as long as they have a network connection with their iPhone."

What: The Site24x7 iPhone app provides mobile users with a snapshot view of website and application status while they are out of the office or on the go. Highlights include:

> *"The iPhone app frees IT pros from their desktop and laptop computers, enabling them to stay informed and take action on actual and potential issues, wherever they go as long as they have a network connection with their iPhone."*

- **Root Cause Analysis reports** – A comprehensive analysis tool includes traceroute, ping, DNS analysis and screenshots of the webpage at the time of the error or outage.

- **Push notification alerts** – Users can register for push notification and receive instant alerts for any performance or downtime issue.

- **Manage configured monitors** – Users can track availability and current status of configured monitors with a few clicks.

Who: Mobile IT professionals who must track website and server status in real time to ensure customers experience optimal availability and performance.

Why: End users have little patience for downtime. When a problem arises, it's vital for IT staff to identify performance issues fast and take corrective action before it affects users. Yet problems arise when they're least expected, and nobody can sit in front of a computer around the clock. The Site24x7 iPhone app is a streamlined, feature-rich version of the full-blown Site24x7 application, and it works just as well on the handset as on the desktop. In turn, network managers and administrators can respond to IT problems in real time, from anywhere, using their iPhones.

When: Available today

Where: Download the free Site24x7 iPhone app at https://www.site24x7.com/server-monitoring-iphone-app.html
