PAM360

PAM360 LICENSE COMPONENTS EXPLAINED

Component	When you need this	What you need to do	Pricing criteria
Administrators	To perform administrative functions in PAM360 such as onboarding resources, configuring security settings, and implementing all other configurations. Includes users with the roles: Administrator, Password Administrator, and Privileged Administrator, Cloud Administrator.	Specify the number of administrators in your organization. Password Users and Password Auditors are not counted toward this license. Licensing is based on the total number of administrators.	Licensing is based on the total number of administrators. The base subscription starts at 10 administrators (bundled with 25 keys). Users assigned a custom role that includes administrator-level operations are also counted toward the administrator license.
Keys	To manage SSH keys and SSL certificates used for authentication and access to critical assets in your organization network. Required if you need complete lifecycle management of SSH keys and SSL certificates from a unified console.	Specify the total number of SSH keys and SSL certificates you need to manage.	Keys are bundled with administrator licenses (e.g., 10 admins include 25 keys). Higher tiers include more keys. Additional keys can be purchased as needed.
Cloud Entitlement Management	To monitor, audit, and remediate cloud identity risks in AWS accounts - including excessive privileges, shadow admins, dormant identities, missing MFA, and non-rotated passwords or access keys. Excessive Privileges and Shadow Admin risks can be remediated directly from PAM360; other risks are guided for remediation via the AWS console.	Specify the number of AWS accounts you need to manage via PAM360. Each account is discovered individually via the Cloud Entitlements tab.	Up to 5 AWS accounts are included with a regular PAM360 license at no extra charge. Additional AWS accounts beyond 5 require an add-on license.
Application Gateway	To manage privileged resources in isolated networks, secure subnets, DMZs, or geographically distributed locations not directly reachable by the PAM360 server. Supports resource discovery, password management, and remote connections (RDP, SSH, VNC).	Specify the number of Application Gateways you need to deploy in your environment.	1 Application Gateway is included with a regular PAM360 license. Additional gateways require an add-on license.
