ManageEngine
SharePoint Manager Plus

The solution for your SharePoint infrastructure's reporting, change auditing, monitoring and migration needs

Comprehensive reporting

Track critical changes to permissions and groups, get an exhaustive list of site user privileges, analyze storage consumption and site trends, and view detailed inventory information on SharePoint farms, content databases, web applications, and site collections.

Real-time audits

Audit SharePoint events and user activities. Track site access, site activity, changes to site permissions, and external sharing. Archive log data for forensic analysis as required by IT regulations.

Health monitoring

Monitor the health status of SharePoint services with comprehensive information on the incident time and severity. Stay up to date and take action when necessary.

Back up and restore

Automate and back up SharePoint on-premises data. Restore your SharePoint environment to a previous version at any time.

Seamless migration

Copy site contents to a new or existing environment with ease. Migrate an entire enterprise environment, or objects such as lists, sites, and files separately.

Unified solution

Supports both online and on-premises environments. Easily manage, monitor, and stay informed on your entire infrastructure.

With SharePoint Manager Plus, you can

Manage sites effortlessly

Empowers you to efficiently manage your sites from a centralised console, while keeping your groups and user permissions under control.

Create alerts profiles

Help detect and notify administrators of critical changes such as site, sub-site and document deletion. These alerts contain detailed reports on the changes that occurred.

Explore your infrastructure

View the complete architecture of both SharePoint on-premises and online environments with the explorer option. It provides information on each component including its properties and related security permissions.

Create custom reports

Create your own custom reports and schedule them at your convenience. Our solution provides complete visibility into your infrastructure, helping you select only what needs to be reported.

Other key features

- No server-side installation necessary
- Email alert notification
- Custom, granular, and role-based delegation
- MFA for secure logon
- Visualized reports with interactive features
- SIEM integration and log forwarding

Pricing details

> We offer flexible pricing options, so you're not limited to predefined slabs. If your total number of Farms or Microsoft 365 Tenants doesn't match the listed slabs, please contact sales@manageengine.com for a customized quote tailored to your needs.
