DEVELOPER MANAGEENGINE
PLATFORM ANDROID

WiFi Analyser and Surveyor is a free tool for managing your wireless network. In the standard analyser mode, you can see all of the nearby Wi-Fi networks plotted on a graph to demonstrate signal strength, check each network for co-channel and inter-channel interference, and see the channels that each of the Wi-Fi networks are deployed on. There's also a special surveyor mode designed for doing site surveys with a floor plan – the results can be exported as a Wi-Fi heat map or signal strength report and saved to email, Dropbox or the photo gallery.
